This commit addresses potential integer overflow issues in memory size calculations by:

- Changing num\_elements type from int32\_t to int64\_t
- Adding overflow checks before size calculations
- Using large\_num\_elements() instead of num\_elements()
- Casting final size to size\_t after overflow validation

The changes affect BuddyMemoryManager and several kernel implementations (ExpandDims, If, Reshape, TransposeConv) to ensure safe memory operations with large tensors.
