```
src/shell/Shell.cpp
612 | 647 |         std::ostringstream ostream;
613 | 648 |         if (argc > 0) {
614 | -   |             SerializerRef::serializeInto(argv[0], ostream);
649 | +   |             serializeInto(argv[0], ostream);
```

github-actions bot last week

Introduce a local lambda that takes a ValueRef\* and serializes it, defaulting to undefined if null, to eliminate repeated serialzeInto calls. Define it near the top of builtin262AgentBroadcast so it is visible only in this function. Then replace the two if-else blocks with calls to this lambda, keeping the logic unchanged. This keeps the code concise and reduces duplication without altering semantics.
