

# HTTP response splitting via \r in reason phrase

Low Dreamsorcerer published **GHSA-mwh4-6h8g-pg8w** yesterday

## Package

 aiohttp (pip)

### Affected versions

<=3.13.3

### Patched versions

3.13.4

## Description

### Summary

An attacker who controls the `reason` parameter when creating a `Response` may be able to inject extra headers or similar exploits.

### Impact

In the unlikely situation that an application allows untrusted data to be used in the response's `reason` parameter, then an attacker could manipulate the response to send something different from what the developer intended.
