Apache Airflow version

3.1.7

If "Other Airflow 3 version" selected, which one?

No response

What happened?

We discovered JWT tokens appearing in the logs.

Run

Time range: Set in query

Show: 1000 results

```

1 ContainerLogV2
2 | where * contains "eyJ"
3 | where TimeGenerated >= ago(30d)
4 | where PodNamespace == "airflow"
5 | extend jwt = extract(@"token='([\^]+)'", 1, tostring(LogMessage))
6 | where isnotempty(jwt)
7 | project TimeGenerated, jwt, LogMessage

```

There exists a function for redacting JWT tokens

[airflow/shared/logging/src/airflow_shared/logging/structlog.py](#)

Lines 205 to 216 in c7cbced

```

205     # `eyJ` is `{` in base64 encoding -- and any value that starts like that is very l
206     # token. Better safe than sorry
207     def redact_jwt(logger: Any, method_name: str, event_dict: EventDict) -> EventDict:
208         for k, v in event_dict.items():
209             if isinstance(v, str):
210                 event_dict[k] = re.sub(JWT_PATTERN, "eyJ***", v)
211         return event_dict
212
213
214     def drop_positional_args(logger: Any, method_name: Any, event_dict: EventDict) -> E
215         event_dict.pop("positional_args", None)
216         return event_dict

```

But it doesn't work for this line, presumably because `workload` is an object not a string -

[airflow/task-sdk/src/airflow/sdk/execution_time/execute_workload.py](#)

Line 56 in c7cbced

```
56     log.info("Executing workload", workload=workload)
```

The workload object has a JWT embedded inside it.

What you think should happen instead?

No response

How to reproduce

Run any DAG

Operating System

debian bookworm

Versions of Apache Airflow Providers

No response

Deployment

Official Apache Airflow Helm Chart
