Contributor

Remove max depth setting to redact Variable, this will make it use default.

Was generative AI tooling used to co-author this PR?

Yes (please specify the tool below)

- Read the [Pull Request Guidelines](#) for more information. Note: commit author/co-author name and email in commits become permanently public when merged.
- For fundamental code changes, an Airflow Improvement Proposal (AIP) is needed.
- When adding dependency, check compliance with the [ASF 3rd Party License Policy](#).
- For significant user-facing changes create newsfragment: `{pr_number}.significant.rst`, in [airflow-core/newsfragments](#). You can add this file in a follow-up commit after the PR is created so you know the PR number.

Backport failed to create: v3-1-test. View the failure log [Run details](#)

Note: As of [Merging PRs targeted for Airflow 3.X](#)

the committer who merges the PR is responsible for backporting the PRs that are bug fixes (generally speaking) to the maintenance branches.

In matter of doubt please ask in [#release-management](#) Slack channel.

Status	Branch	Result
✘	v3-1-test	Commit 74b0fd9

You can attempt to backport this manually by running:

```
cherry_picker 74b0fd9 v3-1-test
```

This should apply the commit to the v3-1-test branch and leave the commit in conflict state marking the files that need manual conflict resolution.

After you have resolved the conflicts, you can continue the backport process by running:

```
cherry_picker --continue
```

If you don't have cherry-picker installed, see the [installation guide](#).

Nice, needs manual backport

sjyangkevin commented [on Mar 18](#)

Author

I attempted to backport the commit, but got many files related to UI and fab provider. I basically fetch the `v3-1-test` and push it into my fork. Then, I ran `cherry_picker 74b0fd9 v3-1-test`. Just curious on why these files come up, and if they are safe to ignore. Thanks
