What type of PR is this?

/kind other

What this PR does / why we need it:

Tag a v1.38.1 release to incorporate the recent security update.

How to verify it

The test suite should be enough.

Which issue(s) this PR fixes:

None

Special notes for your reviewer:

Does this PR introduce a user-facing change?

Changes made in locations mounted using `--mount=type=bind` in RUN instructions in `buildah build` and specified to `buildah run` are now discarded.

Any possibility to adding a [release-1.38] tag to these commits? It looks like the push just grabbed them from main.

nalind on Jan 20, 2025

Member

Author

They were cherry-picked for their respective branches. For release-1.38 I don't recall needing to make any changes. I'm not sure I understand the benefit of going back and retitling the commits, though...?

nalind on Jan 20, 2025

Member

Author

Oh, the actual commits were merged, so changing their commit logs would mean rewriting the history on the branch, which means we can't do that anyway.

TomSweeneyRedHat on Jan 20, 2025

Member

I just find it easier when sorting through history and the change logs to see the leading tags. YMMV, I'm OK with not adding them

nalind on Jan 20, 2025

Member

Right now, they match the commits. It's fine.

TomSweeneyRedHat commented on Jan 20, 2025

One tagging quesiton, otherwise LGTM.

LGTM

I'd prefer the commits to be tagged with [release-1.38], but will live if they are not.

nalind commented on Jan 21, 2025

LGTM I'd prefer the commits to be tagged with [release-1.38], but will live if they are not.

Changing the summaries in the commit log would require rewriting the commit history, and we're not doing that here. The changelog files reflect the commit log.
