SSH Unverified File Handles can Cause Excessive Use of System Resources

Moderate **u3s** published **GHSA-pvj7-9652-7h9r** on Sep 10, 2025

Package

OTP

Affected versions	Patched versions
>= 17.0	28.0.3, 27.3.4.3, 26.2.5.15

ssh (OTP)

>= 3.0.1	5.3.3, 5.2.11.3, 5.1.4.12

Description

Impact

Unverified file handles from authenticated SFTP users can lead to excessive CPU and memory usage, potentially affecting system stability.

This is a server side vulnerability.

Workarounds

- disabling SFTP
- limiting number of max_sessions allowed for sshd, so exploiting becomes more complicated

Affected/Unaffected Versions

A version larger than or equal to one of the listed *patched versions* is **unaffected**; *otherwise*, a version that satisfies an expression listed under *affected versions* is **affected**, and if it does not, it is **unaffected**.

The documentation of the new *OTP version scheme* describes how versions should be compared. Note that versions used prior to OTP 17.0, when the new *OTP version scheme* was introduced, are never listed since it is not well defined how to compare those versions.

In the case of this vulnerability, versions prior to OTP 17.0 are likely also affected.

Severity

Moderate 5.3 / 10
