MiniMax M2.7

- Production-Ready SWE
- Advanced Agentic Abilities
- Professional Workspace

Token Plan - Build, Learn & Ship!

MiniMax-M2.7 is a next-generation large language model designed for autonomous evolution and real-world productivity. Unlike traditional models, M2.7 actively participates in its own improvement through agent teams, dynamic tool use, and reinforcement learning loops. It delivers strong performance in software engineering (56.22% on SWE-Pro, 55.6% on VIBE-Pro, 57.0% on Terminal Bench 2) and excels in complex office workflows, achieving a leading 1495 ELO on GDPval-AA. With high-fidelity editing across Word, Excel, and PowerPoint, and a 97% adherence rate across 40+ complex skills, M2.7 sets a new standard for building AI-native workflows and organizations.

[Click](#) to get an exclusive 12% off the MiniMax Token Plan!

	<p>Thanks to PackyCode for sponsoring this project! PackyCode is a reliable and efficient API relay service provider, offering relay services for Claude Code, Codex, Gemini, and more. PackyCode provides special discounts for our software users: register using this link and enter the "cc-switch" promo code during first recharge to get 10% off.</p>
	<p>Thanks to SiliconFlow for sponsoring this project! SiliconFlow is a high-performance AI infrastructure and model API platform, providing fast and reliable access to language, speech, image, and video models in one place. With pay-as-you-go billing, broad multimodal model support, high-speed inference, and enterprise-grade stability, SiliconFlow helps developers and teams build and scale AI applications more efficiently. Register via this link and complete real-name verification to receive ¥20 in bonus credit, usable across models on the platform. SiliconFlow</p>

	is also now compatible with OpenClaw, allowing users to connect a SiliconFlow API key and call major AI models for free.
	<p>Thanks to Shengsuanyun for sponsoring this project! Shengsuanyun is a super factory serving AI Native Teams — an industrial-grade AI task parallel execution platform. Its model marketplace aggregates Claude, ChatGPT, Gemini, and other domestic and international LLM and multimedia model capabilities with direct supply. Absolutely no reverse engineering or dilution — platform-wide model SLA availability reaches 99.7%, with monitoring dashboards showing green across the board. It also offers enterprise-grade custom gateways for fine-grained team cost and permission management, smart routing, security protection, and BYOK (Bring Your Own Key) hosting. The platform charges on a pay-per-use and tokens plan (coming soon) basis, with invoicing available. Register via this link as a new user to receive ¥10 in credits plus a 10% bonus on your first top-up.</p>
	<p>Thanks to AIGoCode for sponsoring this project! AIGoCode is an all-in-one platform that integrates Claude Code, Codex, and the latest Gemini models, providing you with stable, efficient, and highly cost-effective AI coding services. The platform offers flexible subscription plans, zero risk of account suspension, direct access with no VPN required, and lightning-fast responses. AIGoCode has prepared a special benefit for CC Switch users: if you register via this link, you'll receive an extra 10% bonus credit on your first top-up!</p>
	<p>Thanks to AICodeMirror for sponsoring this project! AICodeMirror provides official high-stability relay services for Claude Code / Codex / Gemini CLI, with enterprise-grade concurrency, fast invoicing, and 24/7 dedicated technical support. Claude Code / Codex / Gemini official channels at 38% / 2% / 9% of original price, with extra discounts on top-ups! AICodeMirror offers special benefits for CC Switch users: register via this link to enjoy 20% off your first top-up, and enterprise customers can get up to 25% off!</p>
	<p>Thanks to Cubence for sponsoring this project! Cubence is a reliable and efficient API relay service provider, offering relay services for Claude Code, Codex, Gemini, and more with flexible billing options including pay-as-you-go and monthly plans. Cubence provides special discounts for CC Switch users: register using this link and enter the "CCSWITCH" promo code during recharge to get 10% off every top-up!</p>
	<p>Thanks to DMXAPI for sponsoring this project! DMXAPI provides global large model API services to 200+ enterprise users. One API key for all global models. Features include: instant invoicing, unlimited concurrency, starting from \$0.15, 24/7 technical support. GPT/Claude/Gemini all at 32% off, domestic models 20-50% off, Claude Code exclusive models at 66% off! Register here</p>
	<p>Thanks to Compshare for sponsoring this project! Compshare is UCloud's AI cloud platform, providing stable and comprehensive domestic and international model APIs with just one key. Featuring cost-effective monthly and pay-as-you-go Coding Plan packages at 60-80% off official prices. Supports Claude Code, Codex, and API access. Enterprise-grade high concurrency, 24/7 technical support, and self-service invoicing. Users who register via this link will receive a free 5 CNY platform trial credit!</p>
	<p>Thank you to Right Code for sponsoring this project! Right Code reliably provides routing services for models such as Claude Code, Codex, and Gemini. It features a highly cost-effective Codex monthly subscription plan and supports quota rollovers—unused quota from one day can be carried over and used the next day. Invoices are available upon top-up. Enterprise and team users can receive dedicated one-on-one support. Right Code also offers an exclusive discount for CC Switch users: register via this link, and with every top-up you will receive pay-as-you-go credit equivalent to 25% of the amount paid.</p>
	<p>Thanks to AICoding.sh for sponsoring this project! AICoding.sh — Global AI Model API Relay Service at Unbeatable Prices! Claude Code at 19% of original price, GPT at just 1%! Trusted by hundreds of enterprises for cost-effective AI services. Supports Claude Code, GPT, Gemini and major domestic models, with enterprise-grade high concurrency, fast invoicing, and 24/7 dedicated technical support. CC Switch users who register via this link get 10% off their first top-up!</p>
	<p>Thanks to Crazyrouter for sponsoring this project! Crazyrouter is a high-performance AI API aggregation platform — one API key for 300+ models including Claude Code, Codex, Gemini CLI, and more. All models at 55% of official pricing with auto-failover, smart routing, and unlimited concurrency. Crazyrouter offers an exclusive deal for CC Switch users: register via this link to get \$2 free credit instantly, plus enter promo code `CCSWITCH` on your first top-up for an extra 30% bonus credit!</p>
	<p>Thanks to SSSAiCode for sponsoring this project! SSSAiCode is a stable and reliable API relay service, dedicated to providing stable, reliable, and affordable Claude and Codex model services, offering high cost-effective official Claude service at just ¥0.5/\$ equivalent, supporting monthly and pay-as-you-go billing plans with same-day fast invoicing. SSSAiCode offers a special deal for CC Switch users: register via this link to enjoy \$10 extra credit on every top-up!</p>

	<p>Thanks to Micu API for sponsoring this project! Micu API is a global LLM relay service provider dedicated to delivering the best cost-performance ratio with high stability. Backed by a registered enterprise for core assurance, eliminating any risk of service discontinuation, with fast official invoicing support! We champion "zero cost to try": top up from as low as ¥1 with no minimum, and get fee-free refunds anytime! Micu API offers an exclusive deal for CC Switch users: register via this link and enter promo code "ccswitch" when topping up to enjoy a 10% discount!</p>
	<p>Thanks to XCodeAPI for sponsoring this project! XCodeAPI offers a special benefit for CC Switch users: register via this link and get an extra 10% credit bonus on your first order! (Contact the site admin to claim)</p>
	<p>Thanks to CTok.ai for sponsoring this project! CTok.ai is dedicated to building a one-stop AI programming tool service platform. We offer professional Claude Code packages and technical community services, with support for Google Gemini and OpenAI Codex. Through carefully designed plans and a professional tech community, we provide developers with reliable service guarantees and continuous technical support, making AI-assisted programming a true productivity tool. Click here to register!</p>
	<p>Thanks to ChefShop AI for sponsoring this project! ChefShop AI is a premium account service provider tailored for heavy AI subscription users. The platform offers official top-up and stable account services for mainstream large models including ChatGPT Plus/Pro, Claude Max, Grok Super/Heavy, and Gemini. Click here to purchase!</p>
	<p>Thanks to LionCC for sponsoring this project! LionCC is built for Vibe Coders who pursue the ultimate development experience. We provide stable, low-latency, and competitively priced computing services for Claude Code, Codex, and OpenClaw, saving up to 50% in costs. After registering, add customer service on WeChat (HSQBJ08888888) with the code "cc-switch" to receive \$10 in free credits (10 million tokens). For other collaborations, follow the blog @LionCC.ai. Click here to register!</p>
	<p>Thanks to DDS for sponsoring this project! DDS Hub is a reliable and high-performance Claude API proxy service. We provides cost-effective domestic Claude direct acceleration services for both individual and enterprise users. We offer stable and low-latency Claude Max number pools, with full support for Claude Haiku, Opus, Sonnet and other flagship models. Invoices are available for recharges of 1000 RMB or more. Enterprise customers can also enjoy customized grouping and dedicated technical support services. Exclusive benefit for CC Switch users: Register via the link below and enjoy an extra 10% credit on your first recharge (please contact the group admin to claim after recharging)!</p>

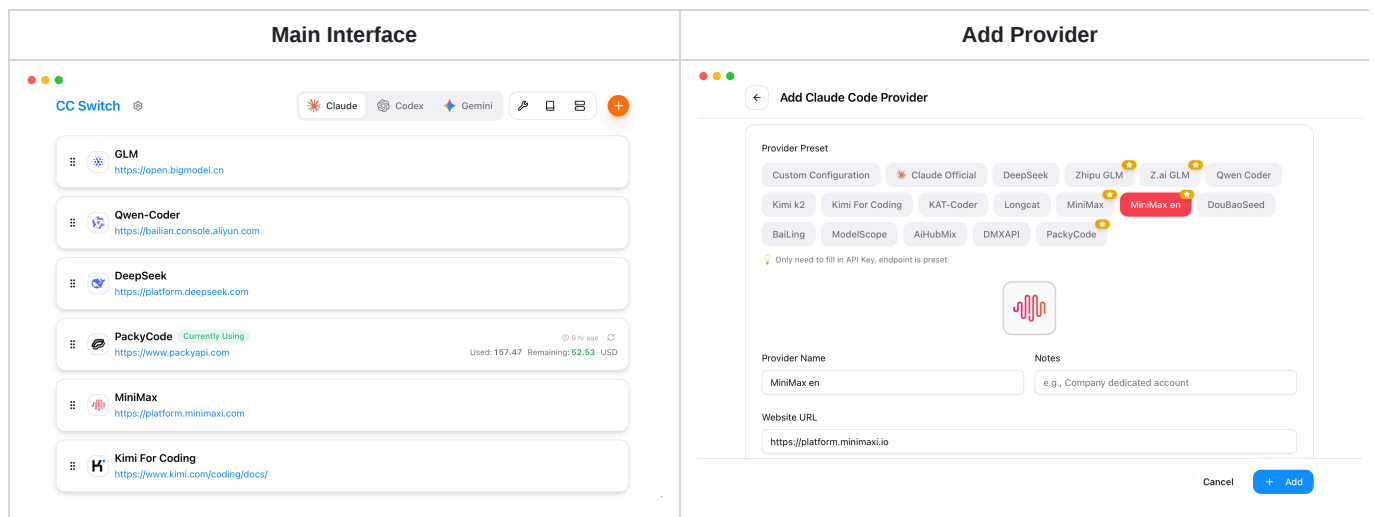

Why CC Switch?

Modern AI-powered coding relies on CLI tools like Claude Code, Codex, Gemini CLI, OpenCode, and OpenClaw — but each has its own configuration format. Switching API providers means manually editing JSON, TOML, or `.env` files, and there is no unified way to manage MCP and Skills across multiple tools.

CC Switch gives you a single desktop app to manage all five CLI tools. Instead of editing config files by hand, you get a visual interface to import providers with one click, switch between them instantly, with 50+ built-in provider presets, unified MCP and Skills management, and system tray quick switching — all backed by a reliable SQLite database with atomic writes that protect your configs from corruption.

- **One App, Five CLI Tools** — Manage Claude Code, Codex, Gemini CLI, OpenCode, and OpenClaw from a single interface
- **No More Manual Editing** — 50+ provider presets including AWS Bedrock, NVIDIA NIM, and community relays; just pick and switch
- **Unified MCP & Skills Management** — One panel to manage MCP servers and Skills across four apps with bidirectional sync
- **System Tray Quick Switch** — Switch providers instantly from the tray menu, no need to open the full app
- **Cloud Sync** — Sync provider data across devices via Dropbox, OneDrive, iCloud, or WebDAV servers
- **Cross-Platform** — Native desktop app for Windows, macOS, and Linux, built with Tauri 2
- **Built-in Utilities** — Includes various utilities for first-launch login confirmation, signature bypass, plugin extension sync, and more

Screenshots

Features

[Full Changelog](#) | [Release Notes](#)

Provider Management

- **5 CLI tools, 50+ presets** — Claude Code, Codex, Gemini CLI, OpenCode, OpenClaw; copy your key and import with one click
- **Universal providers** — One config syncs to multiple apps (OpenCode, OpenClaw)
- One-click switching, system tray quick access, drag-and-drop sorting, import/export

Proxy & Failover

- **Local proxy with hot-switching** — Format conversion, auto-failover, circuit breaker, provider health monitoring, and request rectifier
- **App-level takeover** — Independently proxy Claude, Codex, or Gemini, down to individual providers

MCP, Prompts & Skills

- **Unified MCP panel** — Manage MCP servers across 4 apps with bidirectional sync and Deep Link import
- **Prompts** — Markdown editor with cross-app sync (CLAUDE.md / AGENTS.md / GEMINI.md) and backfill protection
- **Skills** — One-click install from GitHub repos or ZIP files, custom repository management, with symlink and file copy support

Usage & Cost Tracking

- **Usage dashboard** — Track spending, requests, and tokens with trend charts, detailed request logs, and custom per-model pricing

Session Manager & Workspace

- Browse, search, and restore conversation history across all apps
- **Workspace editor** (OpenClaw) — Edit agent files (AGENTS.md, SOUL.md, etc.) with Markdown preview

System & Platform

- **Cloud sync** — Custom config directory (Dropbox, OneDrive, iCloud, NAS) and WebDAV server sync
- **Deep Link** (`ccswitch://`) — Import providers, MCP servers, prompts, and skills via URL
- Dark / Light / System theme, auto-launch, auto-updater, atomic writes, auto-backups, i18n (zh/en/ja)

FAQ

- ▶ **Which AI CLI tools does CC Switch support?**
- ▶ **Do I need to restart the terminal after switching providers?**

- ▶ [My plugin configuration disappeared after switching providers — what happened?](#)
- ▶ [macOS installation](#)
- ▶ [Why can't I delete the currently active provider?](#)
- ▶ [How do I switch back to official login?](#)
- ▶ [Where is my data stored?](#)

Documentation

For detailed guides on every feature, check out the [User Manual](#) — covering provider management, MCP/Prompts/Skills, proxy & failover, and more.

Quick Start

Basic Usage

1. **Add Provider:** Click "Add Provider" → Choose a preset or create custom configuration
2. **Switch Provider:**
 - Main UI: Select provider → Click "Enable"
 - System Tray: Click provider name directly (instant effect)
3. **Takes Effect:** Restart your terminal or the corresponding CLI tool to apply changes (Claude Code does not require a restart)
4. **Back to Official:** Add an "Official Login" preset, restart the CLI tool, then follow its login/OAuth flow

MCP, Prompts, Skills & Sessions

- **MCP:** Click the "MCP" button → Add servers via templates or custom config → Toggle per-app sync
- **Prompts:** Click "Prompts" → Create presets with Markdown editor → Activate to sync to live files
- **Skills:** Click "Skills" → Browse GitHub repos → One-click install to all apps
- **Sessions:** Click "Sessions" → Browse, search, and restore conversation history across all apps

Note: On first launch, you can manually import existing CLI tool configs as the default provider.

Download & Installation

System Requirements

- **Windows:** Windows 10 and above
- **macOS:** macOS 12 (Monterey) and above
- **Linux:** Ubuntu 22.04+ / Debian 11+ / Fedora 34+ and other mainstream distributions

Windows Users

Download the latest `CC-Switch-v{version}-Windows.msi` installer or `CC-Switch-v{version}-Windows-Portable.zip` portable version from the [Releases](#) page.

macOS Users

Method 1: Install via Homebrew (Recommended)

```
brew tap farion1231/ccswitch  
brew install --cask cc-switch
```

Update:

```
brew upgrade --cask cc-switch
```

Method 2: Manual Download

Download `cc-switch-v{version}-macOS.dmg` (recommended) or `.zip` from the [Releases](#) page.

Note: CC Switch for macOS is code-signed and notarized by Apple. You can install and open it directly.

Arch Linux Users

Install via paru (Recommended)

```
paru -S cc-switch-bin
```

Linux Users

Download the latest Linux build from the [Releases](#) page:

- `cc-switch-v{version}-Linux.deb` (Debian/Ubuntu)
- `cc-switch-v{version}-Linux.rpm` (Fedora/RHEL/openSUSE)
- `cc-switch-v{version}-Linux.AppImage` (Universal)

Flatpak: Not included in official releases. You can build it yourself from the `.deb` — see [flatpak/README.md](#) for instructions.

Contributing

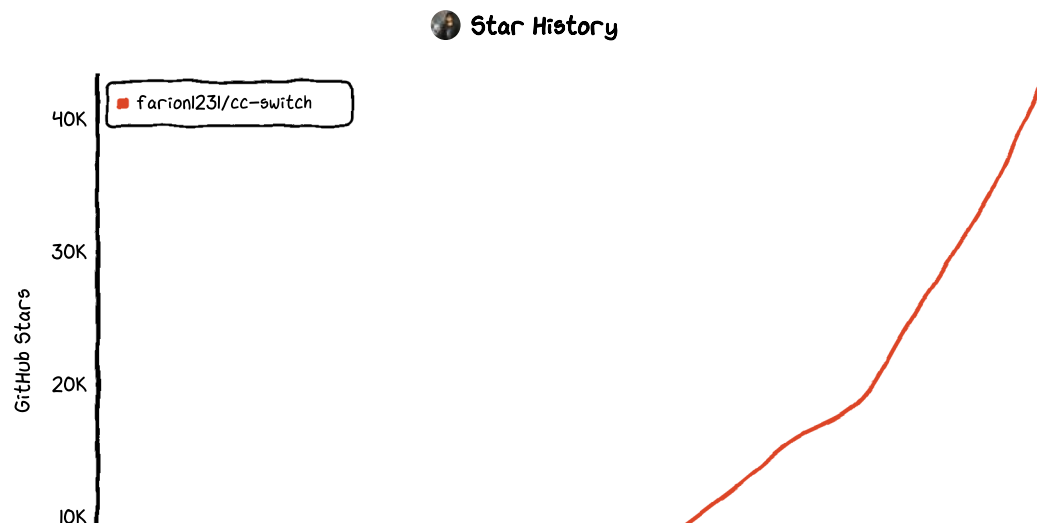

Issues and suggestions are welcome!

Before submitting PRs, please ensure:

- Pass type check: `pnpm typecheck`
- Pass format check: `pnpm format:check`
- Pass unit tests: `pnpm test:unit`

For new features, please open an issue for discussion before submitting a PR. PRs for features that are not a good fit for the project may be closed.
