# Commit 599803b

solar224 committed on Mar 5

fix(pcf): add missing auth middleware to smPolicyGroup and uePolicyGroup

Npcf\_SMPolicyControl and Npcf\_UEPolicyControl route groups were registered without RouterAuthorizationCheck middleware, allowing unauthenticated requests to reach business handlers directly.

Add auth middleware to both groups following the same pattern used by amPolicyGroup, bdtPolicyGroup, oamGroup, and policyAuthorizationGroup. Unauthenticated requests now receive 401 before any business logic runs.

Fixes: unauthenticated access exposing subscriber SUPI via GET /npcf-smpolicycontrol/v1/sm-policies/{smPolicyId}
