# Security Advisory - CVE-2025-69428

**Title:** Unauthenticated Access to Sensitive Directory (Information Disclosure)

**CVE-ID:** CVE-2025-69428

## Description

A critical access control vulnerability in locally deployed Pro-Bit application in versions less than v1.77.4 allows unauthenticated attackers to directly access sensitive directory and its subdirectories.

The directory was publicly accessible without any authentication or authorization checks. It contained highly sensitive files including:

- Plaintext user credentials and corresponding domain accounts
- Database connection strings
- Internal host information
- Encryption methods, keys, and encrypted service-user passwords

This information could be used by an attacker to further compromise the system.

**Status:** Patched by the vendor.

**Disclosure Timeline:**

- Reported: 4th Dec 2025
- Vendor patched: 11th Dec 2025
- CVE assigned: CVE-2025-69428
