Schedule group meetings with friends, colleagues and teams. Create meeting polls to find the best date and time to organize an event based on your participants' availability. Save time and avoid back-and-forth emails.

Built with [Next.js](#), [Prisma](#), [tRPC](#) & [TailwindCSS](#)

Self-hosting

Check out the [self-hosting docs](#) for more information on running your own instance of Rally.

Local Installation

The following instructions are for running the project locally for development.

1. Clone the repository and switch to the project directory

```
git clone https://github.com/lukevella/rally.git
cd rally
```

2. Install dependencies

```
pnpm install
```

3. Setup environment variables

Copy the sample environment file and fill in the required values:

```
cp apps/web/.env.sample apps/web/.env  
cp packages/database/.env.sample packages/database/.env
```

See [configuration options](#) for a full list of available options.

4. Generate Prisma client

```
pnpm db:generate
```

5. Setup database

You will need to have [Docker](#) installed and running to run the database using the provided docker-compose file.

To start the database, run:

```
pnpm docker:up
```

Next run the following command to setup the database:

```
pnpm db:reset && pnpm db:seed
```

This will:

- delete the existing database (if it exists)
- run migrations to create a new database schema
- seed the database with test users and random data

6. Start the Next.js server

```
pnpm dev
```

Contributors

Please read our [contributing guide](#) to learn about how to contribute to this project.

Translators

You can help translate Rally to another language by following our [guide for translators](#).

License

Rally is open-source under the GNU Affero General Public License Version 3 (AGPLv3) or any later version. See [LICENSE](#) for more detail.

Sponsors

Thank you to our sponsors for making this project possible.
