Note

Reviews paused

It looks like this branch is under active development. To avoid overwhelming you with review comments due to an influx of new commits, CodeRabbit has automatically paused this review. You can configure this behavior by changing the `reviews.auto_review.auto_pause_after_reviewed_commits` setting.

Use the following commands to manage reviews:

- `@coderabbitai resume` to resume automatic reviews.
- `@coderabbitai review` to trigger a single review.

Use the checkboxes below for quick actions:

-  Resume reviews
-  Trigger review

Walkthrough

This PR centralizes authentication redirect logic by introducing a new `redirectIfLoggedIn()` helper function and applying it across auth pages. The Layout component's server-side auth redirect is removed, and login, register, forgot-password, and verify pages now consistently use the shared helper instead of individual session checks.

Changes

Cohort / File(s)	Summary
Auth Pages (Redirect Consolidation) <code>apps/web/src/app/[locale]/(auth)/login/page.tsx</code> , <code>apps/web/src/app/[locale]/(auth)/register/page.tsx</code> , <code>apps/web/src/app/[locale]/(auth)/forgot-password/page.tsx</code> , <code>apps/web/src/app/[locale]/(auth)/login/verify/page.tsx</code>	Replaced individual session checks and manual redirect logic with calls to <code>redirectIfLoggedIn()</code> . Imports updated to remove direct session/redirect handling, now delegating to the centralized auth helper.
Auth Library <code>apps/web/src/lib/auth.ts</code>	Added new exported <code>redirectIfLoggedIn()</code> function that retrieves the current session and redirects to root if a non-guest user is authenticated.
Auth Layout <code>apps/web/src/app/[locale]/(auth)/layout.tsx</code>	Removed server-side authentication redirect logic, including <code>getSession()</code>

Cohort / File(s)	Summary
	invocation and conditional redirect for authenticated users. Layout now unconditionally renders children.

Estimated code review effort

 2 (Simple) |  ~12 minutes

Possibly related PRs

-   [Automatically redirect to oidc configured login #2044](#): Modifies the login flow in the same auth pages with OIDC auto-sign-in functionality.
-   [Fix possible infinite loop #1984](#): Addresses login redirect condition behavior that overlaps with the redirect logic being centralized here.
-   [Move user-specific contexts out of root layout into \(app\) route group #2216](#): Refactors session/user loading and auth control flow in route groups, touching related auth state management.

Poem

 *Redirect logic once scattered, now neat,
Auth pages dancing to one helper's beat,
Session checks consolidated with care,
No more duplication in the auth air!*
