Member

Changes

Limit the length of the HTTP response body that is read by `HttpJsonPostTransport`.

Merge requirement checklist

- [CONTRIBUTING](#) guidelines followed (license requirements, nullable enabled, static analysis, etc.)
- Unit tests added/updated
- Appropriate `CHANGELOG.md` files updated for non-trivial changes
- Changes in public API reviewed (if applicable)

This is just a small refactor to use an expression body method I saw while I was looking for usages of `GetAwaiter().GetResult()`.

I've put this into a shared helper with the intention to do some refactoring after the next release to centralise all the logic for this sort of thing into one place.

Pull request overview

Adds a shared helper to cap how much HTTP response body is read (primarily for OneCollector HTTP JSON transport failures) and introduces unit tests to validate truncation/charset/stream behaviors.

Changes:

- Introduce `HttpClientHelpers.TryGetResponseBodyAsString` with a default 4MiB read limit and truncation behavior.
- Use the new helper in `HttpJsonPostTransport` when informational logging is enabled.
- Add unit tests and wire the shared helper into the relevant test/exporter projects.
