ptal done.

this matches the issue i reported: response-body reads for diagnostics are now bounded instead of copied unbounded into memory. please just ensure tests cover success + error paths, including chunked and gzip responses, across trace/metric/log exporters.

from my side, this looks like the right fix.

@1seal,

ptal done.

Thanks!

including chunked and gzip responses

I checked it already. The `httpClient` automatically handles gzip decompression as well as handles chunked transfer encoding transparently.
