Fix a DAAP session list race that can crash OwnTone under concurrent `/login` requests.

Changes:

- serialize DAAP session list access with a mutex
- stop keeping live session pointers in request state
- switch login/logout/session validation to `session-id` based access

Verified by rebuilding and rerunning the concurrent `/login` flood PoC that previously triggered the crash.

**[daap] Fix session list race during concurrent logins** ✓ dca9464

Wow, at first glance this is very impressive! Looks 100% correct to me, but it's a bit of a change, so I need to review a bit more, but I hope to merge it soon.
