What's this PR do?

What Issues does it Close?

Closes

Where should the reviewer start?

How should this be manually tested?

How should the automated tests treat this?

Any background context you want to provide?

What are the relevant tickets?

Screenshots (if appropriate)

Questions:

- Is there a related website / article to substantiate / explain this change?
- Does the development wiki need an update?
- Does the user documentation wiki need an update?
- Does this add new dependencies?

src/v2/templates/query/queryview.php : sql injection + gui update
