Critical SQL Injection

High phili67 published [GHSA-gjw3-73q9-v2qh](#) last week

Package

No package listed

Affected versions

<8.0

Patched versions

None

Description

Impact

- Vulnerable file: `src/v2/templates/query/queryview.php`
- Vulnerable parameters: `custom`, `value`
- Impact: Authentication bypass and Full Database access.

Patches

[#2861](#)

Workarounds

This vulnerability applies only if an administrator grants access rights to database queries. To avoid this issue, it is best never to grant this permission in earlier versions of 8.0.
