# ZenShare Suite - Vulnerability Disclosure

This repository contains details regarding multiple Reflected Cross-Site Scripting (XSS) vulnerabilities discovered in the ZenShare Suite application.

## Vulnerability Overview

The ZenShare Suite application is vulnerable to Reflected Cross-Site Scripting (XSS) affecting the login and password recovery functionalities. An attacker can exploit these issues by crafting a malicious URL and tricking a victim into visiting it, leading to the execution of arbitrary JavaScript code in the victim's browser.

## [CVE-2026-30251]

### Description

A reflected cross-site scripting (XSS) vulnerability in the **login\_newpwd.php** endpoint of Interzen Consulting S.r.l ZenShare Suite v17.0 allows attackers to execute arbitrary Javascript in the context of the user's browser via a crafted URL injected into the **codice\_azienda** parameter.

## Details

- **Vulnerability Type:** Cross Site Scripting (XSS)
- **Affected Component:** `login_newpwd.php`
- **Vulnerable Parameter:** `codice_azienda` (GET)
- **Attack Vector:** Remote
- **Impact:** Javascript Client-Side Code Execution

---

## [CVE-2026-30252]

---

## Description

Multiple reflected cross-site scripting (XSS) vulnerabilities in the **login.php** endpoint of Interzen Consulting S.r.l ZenShare Suite v17.0 allows attackers to execute arbitrary Javascript in the context of the user's browser via a crafted URL injected into the **codice\_azienda** and **red\_url** parameters.

## Details

- **Vulnerability Type:** Cross Site Scripting (XSS)
- **Affected Component:** `login.php`
- **Vulnerable Parameters:** `codice_azienda` , `red_url` (GET)
- **Attack Vector:** Remote
- **Impact:** Javascript Client-Side Code Execution

---

## Affected Versions

---

- **Product:** ZenShare Suite
- **Version:** < 17.0
- **Vendor:** Interzen Consulting S.r.l
