Open-source headless eCommerce platform with a complete REST API, TypeScript SDK, and a production-ready Next.js storefront.

Everything you need to launch cross-border storefronts, B2B wholesale, multi-vendor marketplaces, or multi-tenant SaaS.

Getting Started

Copy and paste the following command to your terminal to set up Spree in 5 minutes:

```
npx create-spre-app@latest my-store
```

The CLI walks you through an interactive setup:

- Choose Full-stack (Backend + Next.js Storefront) or Backend only
- Optionally load sample data (products, categories, images)

You need to have Node.js (22+) installed and Docker running. Learn more in the [installation docs](#).
