Information Leakage in Grafana Alerting

Low

Advisory ID: CVE-2025-12141

Published: 2025-12-16

Product: Grafana

CVSS Score: 1.3

CVSS Vector: CVSS:4.0/AV:N/AC:L/AT:N/PR:L/UI:N/VC:L/VI:N/VA:N/SC:L/SI:N/SA:N/E:U/S:N

Fixed Versions: >12.3.0

Summary

In Grafana's alerting system, users with edit permissions for a contact point, specifically the permissions "alert.notifications:write" or "alert.notifications.receivers:test" that are granted as part of the fixed role "Contact Point Writer", which is part of the basic role Editor - can edit contact points created by other users, modify the endpoint URL to a controlled server. By invoking the test functionality, attackers can capture and extract redacted secure settings, such as authentication credentials for third-party services (e.g., Slack tokens). This leads to

unauthorized access and potential compromise of external integrations. Versions impacted: all versions > 8.0.0 <= 12.3.0.
