Version 1.37.3 changelog:

- Added: Conditional logic to Heading and Separator field.
- Added: Role capabilities for coupons, integrations, import and export screen.
- Removed: Frontend HTML code of deprecated form title.

### February 23, 2023

Version 1.37.2 changelog:

- Changed: Thrive Automator wizard's form dropdown now only shows published forms.
- Changed: Allow uppercase characters in limit character/word controls and limit choice labels.
- Fixed: Invalid HTML in the form builder interface.
- Fixed: Phone field international code input's inconsistent height.
- Fixed: Stripe invalid value Javascript warning.

**February 6, 2023**

Version 1.37.1 changelog:

- Fixed: Thrive Automator integration was being incorrectly blocked.

**February 2, 2023**

Version 1.37.0 changelog:

- Added: Thrive Automator integration.
- Added: Dedicated Forms → Import and Forms → Export screens.
- Changed: License checks have been relaxed so that no submission is lost, even without a valid license key.

**January 13, 2023**

Version 1.36.1 changelog:

- Fixed: Coupons weren't being correctly applied to prices controlled by conditional logic.
- Fixed: Sendinblue integration was misbehaving.

### January 12, 2023

Version 1.36.0 changelog:

- Added: Drip email integration.
- Changed: Slider field settings and rendering have been reworked for better usability.
- Fixed: Quotes in words were incorrectly formatted when pushed to Mailchimp.
- Fixed: Form block attributes are now properly escaped, preventing potential security issues.

### December 15, 2022

Version 1.35.0 changelog:

- Changed: Submissions that contain disallowed words are now automatically trashed for easier handling of false negatives.
- Changed: Dashboard notice displayed after a new form is created has been reworded and made more informative.
- Changed: "Buttons" group in Messages tab has been split up for clearer separation of concerns.

### November 30, 2022

Version 1.34.0 changelog:

- Changed: Integration related messages are now all visible in Messages screen for easier configuration of forms without the need for active credentials.
- Changed: Payment and Opt-in Choice field now always show up in the builder for easier configuration of forms without the need for active credentials.
- Changed: Form importer has been moved to Tools → Import screen for better consistency with core tooling.
- Changed: Forms → Submissions screen now displays better contextual links, depending on the nature of the referral URL.
- Fixed: When importing a form without related submissions, read/unread counters were being wrongly carried over.
- Fixed: Spam submissions were leaving the form in a frozen state.
- Fixed: Conditional logic wasn't working on a empty "Redirect to this page address (URL) after submission" control.
- Fixed: "Spam" and "Trash" counters weren't being updated after bulk deletion of submissions.

## November 8, 2022

Version 1.33.1 changelog:

- Fixed: Opt-In Choice field was preventing email integrations from working correctly.

## November 3, 2022

Version 1.33.0 changelog:

- Added: EmailOctopus email integration.
- Added: "Redirect URI" field with copy-to-clipboard button in Constant Contact section of Integrations screen for easier setup of the integration.
- Added: "Include submitter's IP address", "Include referral link" and "Include submission date and time" controls have been added to Email tab for easier and finer control of metadata appended to email messages.
- Added: Remote license checks now include a failsafe mechanism for network issues scenarios.
- Changed: Stripe's credit card inputs are now in line for a more compact layout.
- Changed: Controls in Messages tab are now all visible all the time for better usability and easier form configuration.
- Removed: Submission moderation links have been removed from email messages.
- Fixed: Concurrent submissions of limited choices in Radio, Checkbox and Dropdown fields were leading to wrong results.

## October 14, 2022

Version 1.32.2 changelog:

- Added: Stripe webhooks support for reliable tracking of payments.
- Changed: Sample form created on activation has been simplified for better reusability.

- Changed: Changelog format has been improved to show release dates and more uniform entry types.
- Changed: Submission counters in Forms screen have been tweaked to better represent unread messages and follow core design.
- Fixed: Sendinblue connection issues could lead to fatal errors because of missing error handling.
- Fixed: Order of evaluation of conditional logic was leading to incorrect behavior.
- Fixed: Real-time page search in "Redirect to this page address (URL) after submission" controls was broken under conditional logic.
- Fixed: Quotes in Messages tab were incorrectly handled and caused data loss.
- Fixed: An incorrect call to `the_title` filter was causing compatibility issues with third-party themes and plugins.

**October 6, 2022**

Version 1.32.1 changelog:

- Changed: Added `happyforms_show_email_submission_links` filter for controlling display of submission management links in emails.
- Fixed: The "Email me a copy of each submission" → "Email subject" control had wrong labeling.
- Fixed: MailPoet wasn't showing up in "Connect with" field.

**September 28, 2022**

Version 1.32.0 changelog:

- Added: 5 new links in email allow for quickly seeing all submissions for the given form, browsing to the original referral page and marking submissions as read, spam or trash.
- Changed: Stripe payment fields have been redesigned for better usability and integration with theme styles.
- Changed: "Save" metabox now allows for editing of submission status and date for finer grained control of submissions.
- Changed: Edit Submission screen title has been tweaked to exactly match WordPress core.
- Changed: Unlabeled fields are now displayed accordingly to WordPress core defaults for better readability.
- Removed: "Fill out this form again" link has been removed to avoid confusion upon successful submissions.
- Removed: "Save incomplete and abandoned submissions" has been removed as it posed potentially serious privacy concerns.
- Removed: "Include reply link" and "Include referral web address" have been replaced in favor of better email defaults.
- Fixed: Submitted values that included special characters were erroneously converted to HTML entities.

**September 2, 2022**

Version 1.31.1 changelog:

- Fixed: On some setups, Dropdown field's default choices wouldn't be selected by default.

- Fixed: Conditional logic controlling field or form properties was misbehaving.

### August 31, 2022

Version 1.31.0 changelog:

- Added: Choices of Radio, Checkbox and Dropdown fields can now be individually controlled through conditional logic.
- Added: New "Print my submission" link after a successful submission lets submitting user print their submitted data.
- Changed: After the form is submitted" dropdown has been replaced with "Redirect to this page address (URL) after submission" control for better usability and less control clutter.
- Changed: Control labels in the builder have been reworded for better clarity.
- Removed: Scale field has been removed, as its functionality can be easily reproduced through Radio field.
- Fixed: Display of field values that include commas in emails was erroneously adding line breaks when a File Upload field is part of the form.
- Fixed: Display of a form's title was misbehaving in the Edit Submission screen for submissions of trashed forms.
- Fixed: Zapier, Integromat and Integrately had stopped recording a submission's referral page.
- Fixed: Submissions that included a successful payment for a form set to redirect weren't being recorded.

- Fixed: Submissions with a Payment field controlled by conditional logic were misbehaving.

## August 11, 2022

Version 1.30.0 changelog:

- Added: New Coupons screen and Payment field's "Accept coupons" control let authors offer discounts on their payment forms.
- Changed: All sections in Style tab are now always visible for easier access to controls.
- Changed: Choice based fields build interface has been tidied up and made more coherent.
- Changed: Display of untitled forms in dashboard screen is now more consistent with WordPress display of untitled posts.
- Changed: Form styles are now packaged in a single bundle for better performance and cache friendliness.
- Changed: Controls in Messages tab has been reordered to be more thematically coherent.
- Changed: PayPal redirection messages have been tweaked to better blend with form styles.
- Changed: A few payment statuses were displaying wrong results in Submissions screen.
- Removed: Poll field has been deprecated in favor of Radio or Checkbox fields.
- Fixed: AWeber integration would trigger errors when authentication tokens expired.

## July 19, 2022

Version 1.29.0 changelog:

- Added: "Set subscription status to" control in Email tab allows for subscribing or unsubscribing submitters from third party email integrations lists.
- Added: Forms that include a required Payment field now trigger third party integrations only if payment has been completed.
- Added: "Bulk Add Choices" control for easily adding long lists of choices to Radio, Checkbox and Dropdown fields.
- Changed: Payment fields now display detailed information in all screens for easier traversal.
- Changed: Reworded Website field description to better match core wording.
- Changed: "Let respondents save a draft submission and come back to it later" control has been replaced with a simpler "Let submitters save a draft for set number of days" control for better usability.
- Removed: "Link to attachments in email" control has been removed from Email tab and turned into default behavior.
- Removed: "Capture user metadata" control has been removed from Setup tab for a clearer interface, and replaced with a new developer filter.
- Fixed: Multiple files couldn't be correctly uploaded through File Upload field on mobile devices.

## June 30, 2022

Version 1.28.0 changelog:

- Added: Toggletip field for creating expandable sections of content.
- Added: "Heading level" control in Heading fields for rendering headings of different levels.
- Changed: Tidied up display of "Add Logic Group" button under Payment field's "Price" setting for better consistency.
- Changed: Heading, Paragraph, Media and Separator fields are now displayed by default in emails for better consistency.
- Changed: Reworded dashboard and builder labels to improve usability.
- Changed: Empty labels in emails now won't result in excessive whitespace.
- Changed: Separator, Paragraph and Media fields "Hint" and "Label" settings have been removed or reworded to improve consistency with the block editor.
- Changed: "Forms" has been reworded to "Submissions" in Media → Library screen "All media items" dropdown.
- Changed: "Width" setting has been added to Heading and Separator fields to improve layout freedom.
- Changed: Wording has been reviewed and made more coherent across all screens.
- Removed: "Hide Paragraph fields in email" control was now redundant.
- Removed: Address field has been deprecated as its functionality is better implemented using a combination of other fields.

- Removed: Location services integrations have been removed since Address deprecation made them useless.
- Fixed: Slider field validation was misbehaving when submitting a value of "0".

**June 13, 2022**

Version 1.27.4 changelog:

- Added: "To email address" control under "Email me a copy of each submission" allows for more granular control of email settings.
- Added: "Reply email address" control under "Email me a copy of each submission" for easier exchanges with submitting users.
- Added: Forms in "All Forms" screen can now be sorted by submission count.
- Changed: "Added to" column in Forms screen now lists templates and reusable blocks for better integration with WordPress.
- Changed: Interface of choices in all choice-based fields has been redesigned for better usability and clarity.
- Changed: Submission counters in Forms and Activity screen now update in real-time for better responsiveness.
- Changed: Submission data for fields removed from forms is now deleted too for tighter privacy.
- Fixed: Payment field validation was misbehaving when Stripe is the only payment method.
- Fixed: Display of fields with limited choices wasn't updating correctly in builder's preview screen.

## May 24, 2022

Version 1.27.3 changelog:

- Added: Submissions are checked against headless browsers for better antispam protection.
- Changed: Form fields and field choices preserve their shuffled state when a validation occurs on submission for better usability.
- Changed: Phone field's country dropdown has been replaced with a number input for better performance and accessibility.
- Changed: Removed the default random API keys for Zapier, Integromat, Integrately integrations.
- Changed: Change "Limit submissions" checkbox to "Max number of submissions" numeric input under the "Setup" tab of the form builder.
- Changed: Change "Delete permanently replies and attachments after set number of days" checkbox to "Erase respondent's personal data after set number of days" numeric input under the "Setup" tab of the form builder.
- Changed: Better wording and style fixes in the form builder.
- Fixed: Opt-In Choice field label spacing was off.

## May 10, 2022

Version 1.27.2 changelog:

- Added: "All forms" dropdown in Media screen allows for easier filtering of media files uploaded through File Upload field.
- Added: "Screen Options" tab now includes "View mode" for better consistency with core WordPress.

- Added: "Empty Spam" button allows for easier bulk-removal of spam activity.
- Changed: Activity screen performance has been optimized for large numbers of form fields and activity entries.
- Changed: Numbers submitted through Phone fields are now callable with a simple click.
- Changed: Installation data is now deleted automatically on plugin removal for easier deactivation.
- Changed: Better linear spacing for all choice-based field controls.
- Changed: Automatic alignment of File Upload field's "Max size per file" control with the server's settings.
- Removed: Matrix field has been deprecated in favor of multiple Radio and Checkbox fields, which offer better usability and accessibility.
- Fixed: Action links in the Activity admin table were causing visual glitches.
- Fixed: An old migration routine was resetting the Email tab "Connect with" control.
- Fixed: Constant Contact integration wasn't able to refresh tokens, forcing authentication again and again.

## April 25, 2022

Version 1.27.1 changelog:

- Added: Checksum-based verification system against repeated spam submissions.

- Added: Added "Headings" for Radio, Checkbox, and Dropdown field choices.
- Changed: "Max number of submissions" counters are now calculated in real time for better consistency.
- Changed: Happyforms block now displays a notice when a form published on page was trashed.
- Changed: Re-arranged the position of "Require an Answer" control for better consistency.
- Changed: Renamed "Limit submissions" control to "Max number of submissions" in all choice-type fields.
- Changed: Improved usability of "Min number" and "Max number" controls in Number field.
- Changed: In all choice-type fields, remaining submissions are now shown by default.
- Fixed: Stripe library was being loaded even when not in use.
- Fixed: Validation error on optional field with min/max requirements.
- Fixed: Address field's "Suggest address based on what the respondent types" control was throwing Javascript errors.
- Fixed: Deprecated "Signature" placeholder control was showing up with "Label" set to hidden.

## April 4, 2022

Version 1.27.0 changelog:

- Added: File Upload field's "Min number of files" and "Max number of files" control allow for finer control of file limits.

- Changed: File Upload field now allows selecting allowed file types one by one, including those added through hooks.
- Changed: All frontend scripts are now bundled in a single file for better performance and cache friendliness.
- Changed: "Spam" links are now available under entries in the Trash tab of the Activity screen.
- Changed: Bulk actions entries have been tidied up when filtering the Activity screen on a single form.
- Fixed: Duplicating a form would throw an error on PHP 8.0.
- Fixed: "Limit how many times this choice can be submitted" counters were being wrongly copied to duplicated forms.

## March 21, 2022

Version 1.26.5 changelog:

- Added: "Limit how many times the same answer can be submitted" allows for setting a submission limit on all open fields.
- Changed: Tidied up horizontal and vertical alignment of notices.
- Changed: Forms are now sorted by "last modified" date for easier management.
- Changed: All instances of a form's navigational controls have been turned into buttons for better accessibility.
- Changed: Website field's prefix now defaults to "https://".
- Removed: "Limit submissions per user" has been deprecated in favor of the new "Limit how many times the same answer can be submitted".

- Fixed: Slider field was throwing errors when using "Allow range select".
- Fixed: Payment field validation was misbehaving on systems running PHP 8.0 and higher.

**February 28, 2022**

Version 1.26.4 changelog:

- Added: "Step Interval" control allows for fine tuning the incrementing interval of Number, Slider and Payment fields.
- Changed: Redesigned layout of multi-page form navigation for better usability and use of space.
- Changed: "Make this choice default" control now supports multiple choices in Checkbox field.
- Changed: Updated Constant Contact integration to match the new authentication system.
- Fixed: Dropdown field was ignoring some style settings.

**February 17, 2022**

Version 1.26.3 changelog:

- Fixed: Dropdown field was misbehaving when involved in conditional logic.

**February 15, 2022**

Version 1.26.2 changelog:

- Added: "Hint" control for adding descriptive text to Radio and Checkbox field choices.
- Changed: Nicer vertical alignment of choices spanning multiple lines in Radio and Checkbox fields.
- Changed: "Align choices" control is now a button group for better usability.
- Changed: Exhausted choices are now always tagged with "(0 remaining)" to avoid confusion.
- Changed: All instances of "submit" type inputs have been replaced with buttons for easier styling.
- Changed: All custom form dropdowns have been replaced with their native counterparts for better performance and accessibility.
- Removed: Rank field has been deprecated, since its functionality is better covered by a combination of other fields.
- Removed: Built-in PDF generation was limited and has been deprecated in favor of dedicated services.
- Removed: "Store replies and attachments in database" control caused issues with other, more important features and has been deprecated.

**January 24, 2022**

Version 1.26.1 changelog:

- Changed: Nonce checks have been removed for improved compatibility with cache plugins.

- Removed: "Tooltip" styling for field hints has been deprecated to improve usability of forms.
- Removed: "Add 'select all' choice" was redundant and has been deprecated.
- Removed: Long Text field's more lightweight with "Add rich text editor toolbar" deprecation.
- Fixed: Form width was rendered incorrectly on specific PHP versions.
- Fixed: Payment field form notices weren't working correctly.

### January 6, 2022

Version 1.26.0 changelog:

- Added: New "Scrollable Terms" field.
- Changed: Multi-page forms have been overhauled for better usability.
- Removed: Long Text field "Rows" behaved inconsistently and has been removed.
- Removed: "Add other choice" control has been deprecated in favor of conditional logic.
- Removed: "Consent Choice" field was redundant and has been deprecated.

### December 14, 2021

Version 1.25.14 changelog:

- Changed: Miscellaneous improvements to Forms screen.

- Changed: New filter allows finer control of assets loading.
- Changed: Ajax handling of actions in Activity screen.
- Fixed: A back-compat routine was preventing submissions on specific form configurations.

**December 9, 2021**

Version 1.25.13 changelog:

- Fixed: Signatures were being cropped incorrectly.

**November 29, 2021**

Version 1.25.12 changelog:

- Fixed: A trailing comma was triggering errors on old versions of PHP.

**November 29, 2021**

Version 1.25.11 changelog:

- Added: "All Forms" screen now shows where a form is being used.
- Changed: Better support for international emails and website addresses.
- Changed: Added unregistered notice in Plugins screen.
- Fixed: Better retro-compatibility for old Signature fields.
- Fixed: Date-Time field "Min year" option was misbehaving.

**November 18, 2021**

Version 1.25.10 changelog:

- Old activities were erroneously removed on some form configurations.

**November 9, 2021**

Version 1.25.9 changelog:

- Added: "Show an error message if field contains words in Disallowed Comment Keys" for antispam integration with core settings.
- Added: Reset buttons allow for resetting fields to defaults in Messages tab.
- Changed: Redesigned the sample form to better showcase current features.
- Changed: Better forms actions notices.
- Changed: Simplified field naming.
- Removed: Signature field "Method" setting has been deprecated.
- Fixed: Resumed submission sessions were causing errors in multi-page forms.
- Fixed: PDF email attachments were causing unwanted removal of file uploads.
- Fixed: Address field "Mode" settings preview wasn't working.
- Fixed: Date-Time field validation was misbehaving.
- Fixed: Validation of fields with "Limit submissions" was misbehaving.
- Fixed: Deprecated controls were showing up in Style tab.

## October 20, 2021

Version 1.25.8 changelog:

- Changed: Legacy Forms widgets can now be transformed into blocks.
- Changed: Hand-drawn signature images are now automatically cropped and optimized when possible.
- Changed: Disabled auto-capitalization, auto-correct and auto-fill on all fields that support it for better usability.
- Removed: Blanks field has been removed.
- Removed: "Schedule visibility" control has been removed.
- Fixed: "Limit submissions" feature was misbehaving when used together with "Show a message and allow to resubmit the form".

## October 13, 2021

Version 1.25.7 changelog:

- Meta: Improved license check system.

## October 6, 2021

Version 1.25.6 changelog:

- Changed: Better selection and insertion of forms in block interface.
- Changed: Web Address field prefix now defaults to empty.
- Removed: "Message location" control led to degraded usability.

- Removed: "Disable buttons until required fields are answered" control led to degraded usability.
- Removed: "Title" section in "Style" tab added clutter and duplicated core functionality.
- Fixed: "Limit submissions" and "Limit submissions per user" weren't working with "Store activity in database" off.

### September 23, 2021

Version 1.25.5 changelog:

- Added: Search integrations by group and term in Integrations screen.
- Changed: Faster preview of Layout Text changes.
- Fixed: File Upload file count not accurate when uploading multiple files that includes an invalid file.
- Fixed: Address field undefined index notice.
- Fixed: Honeypot mechanism was triggering browser autocomplete, preventing submissions.

### September 7, 2021

Version 1.25.4 changelog:

- Added: HTML anchor on form block.
- Changed: Removed Phone Number country flags for better usability and performance.
- Changed: Better notice when uploading duplicate files.

- Fixed: Dropdown item font size doesn't match form style setting.
- Fixed: Form width preview not updating.
- Fixed: Single Choice, Multiple Choice and Dropdown field validation was misbehaving with "Limit submissions" on.

**August 12, 2021**

Version 1.25.3 changelog:

- Fixed: Address field validation was misbehaving.
- Fixed: Integration credentials were being removed without user intervention.

**August 11, 2021**

Version 1.25.2 changelog:

- Changed: New filter for advanced control of CSV exports.
- Changed: New global "Google Geocoding" and "Google Places" integrations.
- Fixed: "Register" and "Role Capabilities" sections weren't respecting capability settings.
- Fixed: "Add 'other' choice" and "Allow multiple choices" were misbehaving on Poll field.
- Fixed: Widget was misbehaving with new block-based Widgets screen.
- Fixed: Number field custom separators weren't working correctly.

- Fixed: Prefilled Long Answer field had styling glitches.
- Fixed: Long Answer field Limit words/characters controls had validation issues.

## July 22, 2021

Version 1.25.1 changelog:

- Fixed: "Add rich-text editor toolbar" and "Disable buttons until required fields are answered" used together were causing Javascript errors.
- Fixed: Removing columns and rows from a Matrix Table field wasn't updating the preview in the builder.
- Fixed: "Disable buttons until required fields are answered" was misbehaving on Matrix Table fields.
- Fixed: Slider Scale field's Hint was overlapping with minimum and maximum number labels.
- Fixed: Dropdown field's "Limit submissions" and "Make this choice default" were causing a fatal error.
- Fixed: Signature field was causing errors during submission.
- Fixed: Signature data was being hidden from Activity screen when switching method.

## July 20, 2021

Version 1.25.0 changelog:

- Added: Signature field now supports hand-drawn signatures.

- Added: Per-form privacy controls allow for finer control of privacy settings.
- Added: "Show remaining submissions" control for Single Choice, Multiple Choice and Dropdown fields.
- Changed: Fields with validation errors are now marked with a CSS class for easier styling.
- Changed: Browser autocompletion has been disabled everywhere for more consistent behavior.
- Changed: Forms now scroll to top only when partially out of the viewport.
- Fixed: "Add custom CSS classes to submit button" was misbehaving.
- Fixed: Geolocation button in Address field had styling glitches.
- Fixed: Multi-page forms were outputting stray divs.
- Fixed: Client metadata was causing fatal errors in specfic scenarios.

**July 5, 2021**

Version 1.24.11 changelog:

- Added: New 'Other' option for Dropdown field, allowing to enter custom text when responding.
- Changed: Blocklist now works on a per-form basis for better control.
- Changed: Better order of countries in Phone Number field.
- Changed: Date of submission in exported CSV files now honors site's date settings.

- Changed: It's now possible to skip the registration key email step.
- Changed: Deactivation popup allows for keeping or deleting saved data.
- Changed: Forms block now supports additional CSS classes.
- Fixed: Arrows in dropdowns were ignoring Style settings.
- Fixed: Duplicating and drag-dropping fields in the builder was scrolling the field list to the top.
- Fixed: 'Schedule visibility' was misbehaving.
- Fixed: reCAPTCHA was misbehaving after credentials removal from Integrations screen.
- Fixed: Stripe payment wasn't working with user-defined price 0.

**June 15, 2021**

Version 1.24.10 changelog:

- Changed: Better usability of Phone Number field's national conventions dropdown.
- Changed: Added "Width" option to Slider Scale and Likert Scale fields.
- Changed: Updated country list for Phone Number field national convention feature.
- Changed: More effective honeypot protection.
- Changed: Javascript dependencies for tooltips are now loaded only when necessary.

- Changed: Restored `happyforms_enqueue_style` filter for completely disabling frontend styles.
- Fixed: "Additional CSS" screen was stripping slashes from CSS code.
- Fixed: Error notices were ignoring color settings.
- Fixed: Date-Time field error notices were misplaced.

**May 26, 2021**

Version 1.24.9 changelog:

- Changed: Added filter to disable automatic searchable behavior in dropdowns.
- Fixed: Jetpack synchronization was triggering a fatal error.

**May 24, 2021**

Version 1.24.8 changelog:

- Changed: Added filter for customizing Date-Time dropdown placeholders.
- Fixed: Email me a copy of each submission → Email subject control was missing.
- Fixed: Opt-In Choice field was missing.

**May 19, 2021**

Version 1.24.7 changelog:

- Changed: Integrations can now be configured on a per-form basis.

- Changed: Dashboard element colors have been brought in line with core.
- Changed: Hints are now shown below field labels.
