-

5.8.0

-

New

-
- credentials
  -

- `IdentitiesOnly`
-
-

Fixed

-
-
-

5.7.6

-

> Please Note: After enabling TLS 1.3 in Transmit 5.7.5, some users reported incomplete uploads with certain FTP servers when using TLS 1.3. In this update we have reset the default TLS version to 1.2. If you find you can no longer connect to your FTP server after this update, you can now select a specific TLS version from **Preferences > Advanced > Advanced Server Settings...**

Improved

-

-
-
-
-
-
-
-
-
-

-
-
-
-
-
-

5.6.3

-

> Please Note: New installations of Transmit will now default to binary transfer mode for FTP connections. You may still change the mode to ASCII (text) or automatic at any time in the Transfer menu. This update does not change your existing preference, but we have noticed that many modern servers do not support text mode properly, so we encourage all users to change their transfer mode to binary whenever possible.

Improved

-
-

-
-
-
-

5.6.2

-

New

- **Preserve Modification Date**

Improved

-
-
-

Fixed

- *One Drive for Business*
