Where workforce management meets intelligence

Turn workforce data into measurable savings

Connect how your team works with what it costs and how it gets paid, and find the savings hiding in plain sight. Affordable Staff saves $928,750 a year by doing exactly that.

Staff smarter with real capacity data

Understand how your team's available hours are actually being used, so that staffing decisions are backed by data, not gut feel.

Rebalance before you hire

Hubstaff

Catch overwork before it becomes burnout

Spot the people who've been running hot for weeks, and adjust their load while it's still an easy conversation.

Explore capacity planning >

Hubstaff

data into clear signals, and your team sees the same data you do.

Get payroll right the first time, in every country

Every payroll error costs you twice: once to fix it, and again in your team's trust. Hubstaff turns approved hours into accurate payouts across employees, contractors, and currencies.

End the payroll correction cycle

Approvals, overtime, and time off flow straight into payroll, so finance isn't fixing timesheets after the fact. TalentPop scaled payroll to 2,000+ global team members, improving workflow efficiency by up to 50%.

One set of rules, every region

Apply the same overtime and holiday policies across every location, so pay is consistent and defensible wherever your team works.

AI workflows

Bill every hour and protect every margin

Unified workforce and project budgets, real-time alerts, and true cost tracking. Hubstaff ties every hour to a client and a budget, so you catch the leaks while there's still time to fix them.

Workforce intelligence, built for AI tools

Connect your workforce data to the tools and AI your team already uses. Build custom workflows, automate repetitive work, and get answers in seconds. Explore Hubstaff's API

Hubstaff

Build AI workflows with the API

One API for your entire workforce operation, with 2× the endpoints of the next-closest platform. Run the full loop from clock-in to client invoice.

Start building >

Put workflows on autopilot with the CLI

Every API endpoint is one command away. Schedule exports, bulk-download screenshots, or let coding agents build workflows you'll reuse for years.

Start automating >

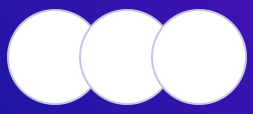

Hubstaff

Ask your data anything with our MCP server

Get answers in ChatGPT or Claude in plain English. Questions that used to take several reports and a spreadsheet now take one sentence.
