Security
Advisory:
CVE-2025-
55645 -
Heap
Buffer
Overflow in
GPAC
MP4Box
PSSH Copy

Processing
a crafted
MP4 file
with
malformed
PSSH data
can trigger
a heap
buffer
overflow in
`gf_cenc_s
et_pssh()`,
causing a
crash and
potential
memory
disclosure
or memory
corruption
impact.

Summary:
The

Create account

Login

et_pssh()
function in
`isomedia/
drm_sampl
e.c` does
not
sufficiently
validate the
size of
PSSH data
before
copying it
into a heap
buffer. A
crafted
MP4 file
can declare
an
oversized
PSSH
payload,
causing
MP4Box to
copy a very
large
amount of
data from a
512-byte
heap
allocation
during
DASH/CEN
C
processing
.

CWE:
CWE-120 -
Buffer

automated
media
workflow
invokes
MP4Box on
attacker-
controlled
input.

Impact:
The
immediate
observed
impact is
Denial of
Service due
to process
termination
. Because
the bug
performs
an
oversized
heap read
during
`memcpy()`
,
informatio
n
disclosure
may be
possible.
Memory
corruption
and
potential
arbitrary
code
execution

Fix /
mitigation
status:
The issue
was fixed
in GPAC
commit:

...

df0c81722
847238659
a6beb0fea
b2c1ecd05
c020
...

Users
should
update to a
GPAC build
containing
this
commit or
later. The
affected
code
should
validate
PSSH
payload
sizes and
destination
buffer
capacity
before
copying
PSSH data.
