## NAME

perldelta - what is new for perl v5.42.2

## DESCRIPTION

This document describes differences between the 5.42.1 release and the 5.42.2 release.

If you are upgrading from an earlier release such as 5.42.0, first read perl5421delta, which describes differences between 5.42.0 and 5.42.1.

## Security

## [CVE-2026-4176] Vulnerability in Compress::Raw::Zlib

Compress::Raw::Zlib is included in Perl as a dual-life core module, and was vulnerable to [CVE-2026-3381] due to a vendored version of zlib which had several vulnerabilities, including [CVE-2026-27171].

This problem was assigned [CVE-2026-4176] by the CPAN Security Group.

## Incompatible Changes

There are no changes intentionally incompatible with 5.42.1. If any exist, they are bugs, and we request that you submit a report. See "Reporting Bugs" below.

## Modules and Pragmata

### Updated Modules and Pragmata

- Compress::Raw::Zlib has been upgraded from version 2.213 to 2.222.
- Module::CoreList has been upgraded from version 5.20260308 to 5.20260329\_42.

## Documentation

### Changes to Existing Documentation

We have attempted to update the documentation to reflect the changes listed in this document. If you find any we have missed, open an issue at <https://github.com/Perl/perl5/issues>.

## Testing

Tests were added and changed to reflect the other additions and changes in this release.

## Acknowledgements

Perl 5.42.2 represents approximately 3 weeks of development since Perl 5.42.1 and contains approximately 2,900 lines of changes across 57 files from 6 authors.

Excluding auto-generated files, documentation and release tools, there were approximately 1,900 lines of changes to 23 .pm, .t, .c and .h files.

Perl continues to flourish into its fourth decade thanks to a vibrant community of users and developers. The following people are known to have contributed the improvements that became Perl 5.42.2:

Eric Herman, James E Keenan, Olaf Alders, Paul Marquess, Richard Leach, Steve Hay.

(/)

The list above is almost certainly incomplete as it is automatically generated from version control history. In particular, it does not include the names of the (very much appreciated) contributors who reported issues to the Perl bug tracker.

Many of the changes included in this version originated in the CPAN modules included in Perl's core. We're grateful to the entire CPAN community for helping Perl to flourish.

For a more complete list of all of Perl's historical contributors, please see the *AUTHORS* file in the Perl source distribution.

## Reporting Bugs

If you find what you think is a bug, you might check the perl bug database at <https://github.com/Perl/perl5/issues>. There may also be information at <https://www.perl.org/>, the Perl Home Page.

If you believe you have an unreported bug, please open an issue at <https://github.com/Perl/perl5/issues>. Be sure to trim your bug down to a tiny but sufficient test case.

If the bug you are reporting has security implications which make it inappropriate to send to a public issue tracker, then see "SECURITY VULNERABILITY CONTACT INFORMATION" in *perlsec* for details of how to report the issue.

## Give Thanks

If you wish to thank the Perl 5 Porters for the work we had done in Perl 5, you can do so by running the `perlthanks` program:

```
perlthanks
```

This will send an email to the Perl 5 Porters list with your show of thanks.
