- Add missing classes to `Laravel\Nova\Nova::serializableClasses()`.
- Fix Lens total row count incorrect when using "with trashed".
- Fix `PasskeyButton` component is shown on confirmation password modal when the feature is not enabled.

- Update NPM dependencies.

v5.9.4 (Silver Surfer)

Released Jul 10, 2026

- Supports securing serializable classes on Laravel 13 using `Laravel\Nova\Nova::serializableClasses()` .
- Update NPM dependencies.

v5.9.3 (Silver Surfer)

Released Jul 02, 2026

- Fix 2FA users stuck in recursive login redirection
- Update NPM dependencies.

v5.9.2 (Silver Surfer)

Released Jun 29, 2026

- Fix successful passkey login redirection.
- Update NPM dependencies.

v5.9.1 (Silver Surfer)

Released Jun 24, 2026

- Fix "Sign in with a passkey" button is shown when the feature is disabled.

v5.9.0 (Silver Surfer)

Released Jun 23, 2026

- Update NPM dependencies.
- Supports Passkey authentication with Laravel Fortify (requires Laravel 11 and above).
- Fix `InlineActionDropdown` to handle action endpoint props.
- Fix deadlock in `ActionEvent::prune()` when the same action runs concurrently on a model on certain database environment.
- Fix Laravel 13 compatibilities on generated stubs.

v5.8.3 (Silver Surfer)

Released Apr 29, 2026

- Update NPM dependencies.
- Fix compatibility with `brick/money` 0.12.
- Remove redundant reactive & computed `isWorking` .

v5.8.2 (Silver Surfer)

Released Apr 15, 2026

- Disable checking for `shouldFailOnUnknownFields()` on `NovaRequest` classes.
- Update NPM Dependencies.

v5.8.1 (Silver Surfer)

Released Mar 28, 2026

- Support `inertiajs/inertia-laravel` v3.

- Add `Laravel\Nova\Actions\Responses\StreamExportableCsv::export()` method.
- Update NPM dependencies.

v5.8.0 (Silver Surfer)

Released Mar 19, 2026

- Supports Laravel 13.
- Use `laravel/sentinel` for restricting private tunnel requests for local environment.
- Update NPM dependencies.

v5.7.7 (Silver Surfer)

Released Feb 11, 2026

- Supports Inertia.js 2.3.
- Supports restricting private tunnel requests for local environment.
- Fix authorized action aggregation when multiple resources are selected.
- Update NPM dependencies.

v5.7.6 (Silver Surfer)

Released Oct 19, 2025

- Supports Inertia.js 2.2.
- Fix `DateTimeField` filter shifts by timezone difference on each load.
- Fix `Line` field ignores `canSee()` method.
- Fix `Slug` field usage within `Tab` panel.
- Fix `KeyValue` field does not properly propagate `readonly` state on Detail page.

- Improves **419** session expired event.

v5.7.5 (Silver Surfer)

Released Jul 31, 2025

- Update NPM dependencies.

v4.35.11 (Silver Surfer)

Released Jul 31, 2025

- Update NPM dependencies.

v5.7.4 (Silver Surfer)

Released Jul 02, 2025

- Add **nova:auth** middleware group and fix authentication routes available after user has logged-in.
- Allows checking model's relationship return type to determine if relationship exists using relationship method's return type.
- Fix **readonly()** usage on **Slug** field.
- Fix **ResourceIndex** gap define within Tab when missing search, standalone actions and authorized to create.
- Update NPM dependencies.

v5.7.3 (Silver Surfer)

Released Jun 16, 2025

- Fix compatibility with latest `laravel/fortify` .
- Fix SQL Binding Error with `BelongsTo` Field and Custom `defaultOrderings` using `Relatable` rule.
- Update NPM dependencies.

v5.7.2 (Silver Surfer)

Released Jun 02, 2025

- Fix delete all notification actions.
- Fix `beforeCreate()` not applied for all use case.
- Improves notifications queries to include indexes.
- Stub Improvements.
- Update NPM dependencies.

v5.7.1 (Silver Surfer)

Released May 19, 2025

- Override `Laravel\Nova\Http\Requests\NovaRequest::user()` method to use `nova.guard` configuration value as default.
- Allows to create custom `policy.stub` via `/stubs/nova/policy.stub` file instead of default `/stub/policy.stub` .
- Update NPM dependencies.

v4.35.10 (Silver Surfer)

Released May 19, 2025

- Update NPM dependencies.

v5.7.0 (Silver Surfer)

Released May 15, 2025

- Add `beforeCreate` , `beforeUpdate` , `beforeDelete` , `beforeForceDelete` , and `beforeRestore` to Resource.
- Add draft `Token` field.
- Add e-mail enumeration protection on password reset via `withPasswordResetRoutes(preventsEmailEnumeration: true)` .
- Bind `filterable()` to scope `$this` to current `Field` instance.
- Validates throttle middleware configurations before applying to routes.
- Static types improvements.
- Update NPM Dependencies.

v5.6.3 (Silver Surfer)

Released May 12, 2025

- Field filters now support the `make` method allowing for a cleaner syntax.
- Eager loads `target` and `user` on `Laravel\Nova\Actions\ActionResource` .
- Update NPM Dependencies.

- Add `InteractsWithDates` to `laravel-nova` mixins.
- Disable registering scoped container when authentication is disabled.
- Fix `Laravel\Nova\Auth\Actions\UpdateUserPassword` not using the correct user guard for Nova.
- Remove `Illuminate\Support\Collection::isAssoc()` macro.

v5.1.10 (Silver Surfer)

Released Feb 01, 2025

- Fix cascading default value isn't populated initially on Create page.
- Fix `FieldDownloadController` returning a redirect to a temporary URL.

v4.35.6 (Silver Surfer)

Released Feb 01, 2025

- Fix compatibility with Laravel Framework 11.41.1.

v5.1.9 (Silver Surfer)

Released Jan 30, 2025

- Fix compatibility with Laravel Framework 11.41.1.

v5.1.8 (Silver Surfer)

Released Jan 28, 2025

- Fix `:read-only` CSS pseudo-class globally affecting `<select>` .
- Fix Reset Filter doesn't populate correct value for `SelectFilter` component.
- Fix Two-Factor Confirmation fails when not using the default guard.

v5.1.7 (Silver Surfer)

Released Jan 26, 2025

- Fix `Textarea` field configured as `readonly()` state.
- Fix Form element with `:read-only` to match `:disabled` .

v5.1.6 (Silver Surfer)

Released Jan 25, 2025

- Fix clicking filter icon without changing filters resets list to first page in pagination.
- Fix `Gate` unable to resolve correct `Policy` class for Resource.
- Bump to `@inertiajs/vue` 2.0.3.

v5.1.5 (Silver Surfer)

Released Jan 20, 2025

- `nova:install` command improvements.
- Docblock improvements.
- Fix deprecation error on `Laravel\Nova\Actions\ActionResource` .
- Fix error when many-to-many relationship not extending `Pivot` class.
- Bump to `@inertiajs/vue` 2.0.2.

v5.1.4 (Silver Surfer)

Released Jan 15, 2025

- Fix `Dependent` searchable `Select` field not showing selected value.
- Fix Action's `canRun()` disables only the first action.
- Improves `Laravel\Nova\Fields\FormData` docblock.

v5.1.3 (Silver Surfer)

Released Jan 12, 2025

- Fix fails to bootstrap Fortify on the first request using Octane.
- Disable e-mail verification routes by default.

v5.1.2 (Silver Surfer)

Released Jan 10, 2025

- Fix missing page loading progress for Inertia.js 2.
- Fix unable to filter searchable relation when adding the relation is blocked.
- Fix disabled `Tab` styling.
- Explicitly set `Content-Disposition` to `ExportAsCsv` response.

v5.1.1 (Silver Surfer)

Released Dec 22, 2024

- Allow preview of `image/avif` files on index and detail pages.
- Fix tab pabel styling when using dark mode.
- Fix `route:cache` error when the application has custom Fortify routes.
- Fix deprecation warning regarding `TrashedStatus` enums.
- Add `"User Security"` to language file.

v5.0.4 (Silver Surfer)

Released Dec 19, 2024

- Fix Fortify route loading conditions.
- Fix custom colors within partition metrics.
- Fix missing gap between field panels.

v5.0.3 (Silver Surfer)

Released Dec 18, 2024

- Ensure bootstrapping Nova persists between normal page loads and browser refreshes.

v5.0.2 (Silver Surfer)

Released Dec 17, 2024

- Fix tab panels not showing toolbar when used as the first panel on the page.
- Fix `Date` and `DateTime` field input size.
- Fix `nova:install` command when using Fortify default routes.
- Fix problem running `npm install` when initiating new packages using the `file:` prefix.

v5.0.1 (Silver Surfer)

Released Dec 16, 2024

- Fix `Boolean` field alignment on index page.
- Fix `ActionRequest::actionableKey()` return type.
- Persist `<TabPanel>` when changing tabs on form pages.
- Update `symfony/finder` minimum version requirement.

v5.0.0 (Silver Surfer)

Released Dec 13, 2024

- Introduce tab panels.
- Introduce immutable fields.
- Support dependent computed fields.
- Support dedicated Nova policy classes.
- Support Inertia 2.x.
- Support Heroicons 2.x.
- Support Trix 2.x.

- Support Laravel Fortify for authentication.
- Drop support for Laravel 8.x and 9.x.
- Drop support for deprecated Algolia Places field.
- Drop `doctrine/dbal` dependency.

v4.35.5 (Silver Surfer)

Released Nov 21, 2024

- Add `start-nova-impersonation` and `stop-nova-impersonation` named routes.
- Allow `brick/money` v0.10.
- Fix calling `displayUsing()` without passing `$attribute` to `Field::make()`.
- Trigger metrics refresh when filters are reset via `refreshWhenFiltersChange()`.

v4.35.4 (Silver Surfer)

Released Oct 23, 2024

- Fix regression for third party components relying on the `associatable` endpoint.
- Fix `once()` usage to avoid duplicate queries.
- Fix `Searchable` field focus with `onblur` event.

v4.35.3 (Silver Surfer)

Released Oct 09, 2024

- Fix `MenuItem::filter()` breaking filters that have custom `key()` methods.
- Fix dependent `BelongsTo` fields compatibility with replication.
- Fix `Enter` key redirecting cursor to `Markdown` field instead of submitting form.

v4.35.2 (Silver Surfer)

Released Sep 25, 2024

- Fix index standalone actions showing on de-select.
- Fix using `/` as `nova.path` with `route:cache`.
- Prevent `search` input parameter from wrongly impacting associatable and morphable model searches.

v4.35.1 (Silver Surfer)

Released Sep 02, 2024

- Fix `MetricTableRow` cells alignment.
- Fix Tag field documentation.
- Update NPM dependencies (security).

v4.35.0 (Silver Surfer)

Released Aug 06, 2024

- Fix `ActionRequest` inconsistently receiving comma separated string instead of `array`.
- Fix `BooleanGroup` field when no data is present.
- Fix `MetricTableRow` subtitle text overflow.
- Fix `Multiselect` field losing selection on edit view when using integer keys.
- Fix `Number` field not honoring `nullable()` with custom values.
- Fix `Repeater` field drop-down z-index within modal dialog.
- Fix `searchable()` usage on `BelongsTo` field fetching all available resources when cleared by the user.
- Fix detaching pending attachments.

- Fix filterable fields not resolving correctly when both `fieldsForIndex()` and `fields()` methods exist.
- Fix multiple `canRun` callbacks on actions not respecting "truthy" states.

v4.34.3 (Silver Surfer)

Released Jun 12, 2024

- Fix pressing `Enter` on `GlobalSearch` when there is no result.
- Fix `BelongsTo` making unnecessary requests when the field is hidden.
- Fix `MultiSelect::displayUsingLabels` with multiple selected items.
- Fix passing string values for `groupBy` parameters on `Partition` class.

v4.34.2 (Silver Surfer)

Released May 23, 2024

- Various bug fixes.

v4.34.1 (Silver Surfer)

Released May 23, 2024

- Fix missing compiled assets.

v4.34.0 (Silver Surfer)

Released May 23, 2024

- Fix multiple `HasMany` relationships not detecting reverse relationships.

- Improve default installation without starter kits.
- Update NPM dependencies.
- Fix **Markdown** field not working properly through **HasOne** relationship.
- Fix **MultiSelect** not showing selected options on index and detail pages.

v4.33.3 (Silver Surfer)

Released Apr 18, 2024

- Various bug fixes.

v4.33.2 (Silver Surfer)

Released Apr 03, 2024

- Fix PHP deprecation errors related to rounding and dividing when using metrics.

v4.33.1 (Silver Surfer)

Released Mar 26, 2024

- Fix rounding error leading to PHP deprecation message.

v4.33.0 (Silver Surfer)

Released Mar 12, 2024

- Support for Laravel 11.

v4.32.16 (Silver Surfer)

Released Mar 05, 2024

- Fix readonly state for `Text` field.
- Fix handling relationships with a foreign ID of `0`.
- Fix view and edit button styling.
- Fix `SearchInput` backdrop z-index issue when using action modals.
- Fix initial input field not being focused in action modals.

v4.32.15 (Silver Surfer)

Released Feb 26, 2024

- Address bug with `SearchInput`.
- Fix lenses ignoring search values when running an action with "Select All".

v4.32.14 (Silver Surfer)

Released Feb 21, 2024

- Fix Repeater field HasMany preset incorrectly handling Postgres auto-incrementing IDs.
- Fix anchor tag for "View" and "Edit" button missing "href" attribute.
- Fix resource peeking becoming stuck in loading state.
- Fix invalid click handler when switching between searchable filters.

v4.32.13 (Silver Surfer)

Released Feb 17, 2024

- Various bug fixes.

v4.32.12 (Silver Surfer)

Released Feb 14, 2024

- Various bug fixes.

v4.32.11 (Silver Surfer)

Released Dec 19, 2023

- Temporarily disabled focus trap for the confirm action modal since it was causing issue with search inputs.

v4.32.10 (Silver Surfer)

Released Dec 14, 2023

- Fixed an issue preventing `Action::download` from initiating the download.
- Fixed an issue with empty action dropdown menus.
- Fixed an issue where the built-in `ExportAsCsv` action was not working.

v4.32.9 (Silver Surfer)

Released Dec 06, 2023

- Fixed a visual issue with action dropdown headings.

v4.32.8 (Silver Surfer)

Released Dec 06, 2023

- Added visual improvements to the theme dropdown.
- Improved accessibility of the **File** field dropzones.
- Added "Actions" and "User Actions" labels to action dropdown menus.
- Fixed an issue where actions that could not be run were still showing in the action dropdown.

v4.32.7 (Silver Surfer)

Released Dec 06, 2023

- Fixed an issue where action field modal were not trapping focus anymore.

v4.32.6 (Silver Surfer)

Released Nov 25, 2023

- Fixed an issue where fields with search inputs were not scrolling when selecting items via the keyboard.

v4.32.5 (Silver Surfer)

Released Nov 24, 2023

- Fixed issue where search input clear button was incorrectly positioned.

v4.32.4 (Silver Surfer)

Released Nov 24, 2023

- Fixed visual issue where notification count text was not consistent with other dark mode text.

v4.32.3 (Silver Surfer)

Released Nov 24, 2023

- Fixed issue where tag input was not displaying correctly.

v4.32.2 (Silver Surfer)

Released Nov 23, 2023

- Fixed issue with value metric formatting in certain locales.

v4.32.1 (Silver Surfer)

Released Nov 21, 2023

- Fixed a visual issue with notification buttons.

v4.32.0 (Silver Surfer)

Released Nov 21, 2023

- Added the ability to show notification counts in the header with the new `Nova::showUnreadCountInNotificationCenter` method.

- Added a missing localization string for notification delete confirmation text.
- Fixed an issue where table checkboxes were hiding incorrectly in certain scenarios.
- Fixed an issue where search input backdrops were not the full height of the viewport making it impossible to close when scrolling.
- Fixed a visual issue with the "select all" dropdown.

v4.31.3 (Silver Surfer)

Released Nov 15, 2023

- Fixed an issue with Value metric previous value tooltips.

v4.31.2 (Silver Surfer)

Released Nov 15, 2023

- Internal code cleanup.

v4.31.1 (Silver Surfer)

Released Nov 15, 2023

- Added a visual improvement to Value metrics tooltips formatting.

v4.31.0 (Silver Surfer)

Released Nov 15, 2023

- Value metrics will now show the previous value when hovering over the percent change text.

v4.30.0 (Silver Surfer)

Released Nov 15, 2023

- Added new **afterRestore** resource hook.

v4.29.8 (Silver Surfer)

Released Nov 14, 2023

- Fixed an issue that emerged from last release.

v4.29.7 (Silver Surfer)

Released Nov 14, 2023

- Fixed an issue that emerged from last release.

v4.29.6 (Silver Surfer)

Released Nov 14, 2023

- Fixed an issue causing search dropdowns to be blocked by the parent card's hidden overflow.
- Added a new **attribute** property and **withAttribute** helper to **Panels** allowing a unique identifier to be used for the panel's collapsed setting.

v4.29.5 (Silver Surfer)

Released Nov 09, 2023

- Fixed some more issues with z-index stacking.

v4.29.4 (Silver Surfer)

Released Nov 06, 2023

- Fixed some issues with z-index stacking.

v4.29.3 (Silver Surfer)

Released Nov 06, 2023

- Fixed an issue with loading cards loader being on top of notifications overlay.

v4.29.2 (Silver Surfer)

Released Nov 01, 2023

- Added ability to localize the message displayed when table metrics have no results.

v4.29.1 (Silver Surfer)

Released Nov 01, 2023

- Improved some visual styles.
- Fixed an issue where view and edit buttons had an incorrect hover style.

v4.29.0 (Silver Surfer)

Released Oct 31, 2023

- Added empty text to table metrics.
- Added `emptyText` method to table metrics to allow customization of the empty text.
- Fixed an issue preventing icons from showing in table metric rows.
- Fixed an issue pivot actions weren't following the current Resource class.
- Fixed an issue where using Inertia with SSR on your main site would cause issues.

v4.28.1 (Silver Surfer)

Released Oct 30, 2023

- Fixed an issue where trend metrics weren't correctly showing custom branding colors.

v4.28.0 (Silver Surfer)

Released Oct 24, 2023

- Nova will now display page titles with the page title first and the application name second.
- Fixed an issue where `Number` filters weren't correctly applied when the value was zero.
- Fixed an issue where `MorphTo` relationship labels were ignoring field labels on detail views.
- Fixed an issue where `Repeater` fields using unique fields weren't correctly saving.

v4.27.14 (Silver Surfer)

Released Oct 10, 2023

- Added new `MenuItem::filter` method to allow creating links to resources with filters already applied.
- Nova now allows Badge labels to be a callback.
- Improved the visual style of menus.
- Fixed an issue where standalone actions wouldn't refresh the index table.

v4.27.13 (Silver Surfer)

Released Sep 19, 2023

- Nova now pauses resource polling when selecting all resources or when resources are selected.
- Added `meta` tag to Nova's layout to prevent search engines from indexing the page.
- Improved visual style of some components.
- Fixed an issue resolving Nova's initial path in certain scenarios.
- Fixed an issue with the `Code` field when display `null` values on the detail page.
- Fixed an issue deleting rows in `Repeater` fields.
- Fixed an issue where `Repeater` fields using `uniqueField` could cause errors.
- Fixed an issue where clicking the backdrop of a modal didn't emit the correct events.
- Fixed an issue preventing running actions and deleting many-to-many relationships when using pivot fields.
- Fixed an issue preventing required fields from showing their asterisk on Lens action modals.
- Fixed an issue with `Repeater` fields when using multiple repeatable types.
- Fixed an issue with `Repeater` fields when submitting from a parent resource form.
- Fixed an issue where the query params when selecting all resources didn't include the current search term.
- Fixed an issue with inconsistent Ctrl/Command keypresses in Global search.
- Fixed an issue where `filterable MorphTo` fields didn't remember the selected option from the filter query hash.
- Fixed an issue with exporting CSVs with Laravel Octane.

- Nova now allows use validation rules following Laravel 10's **ValidationRule** contract without using enclosing the rule in an array.

v4.27.12 (Silver Surfer)

Released Aug 13, 2023

- Nova will now hide the "Mark Read" notification button when the notification is already marked as read.

v4.27.11 (Silver Surfer)

Released Aug 13, 2023

- Fixed several visual issues with loading overlays.

v4.27.10 (Silver Surfer)

Released Aug 11, 2023

- Fixed a visual issue with notifications in dark mode.

v4.27.9 (Silver Surfer)

Released Aug 11, 2023

- Fixed a visual issue with notifications in dark mode.

v4.27.8 (Silver Surfer)

Released Aug 10, 2023

- Improved Notification Center styling
- Added ability to delete all notifications.

v4.27.7 (Silver Surfer)

Released Aug 10, 2023

- Fixed a visual issue with Nova notifications.

v4.27.6 (Silver Surfer)

Released Aug 10, 2023

- Fixed a visual issue with Nova notifications.

v4.27.5 (Silver Surfer)

Released Aug 10, 2023

- Fixed issue with Nova notifications.

v4.27.4 (Silver Surfer)

Released Aug 09, 2023

- Fixed Nova asset compilation issues with the 4.27.x versions.

v4.27.3 (Silver Surfer)

Released Aug 09, 2023

- Added missing translation for Notifications.

v4.27.2 (Silver Surfer)

Released Aug 09, 2023

- Fixed issue where deleting a notification hid Notification Center incorrectly.

v4.27.1 (Silver Surfer)

Released Aug 09, 2023

- Improved visual look of Notification Center.
- Clicking items in Notification Center now hides Notification Center.

v4.27.0 (Silver Surfer)

Released Aug 09, 2023

- Nova now allows combining the `message` and `danger` methods with the `modal`, `download`, `deleted`, and `visit` methods.
- Nova now allows dependent fields to reset the field value with `$field->setValue(null)`.
- `Nova::initialPath` now accepts a `Closure` to allow for dynamic initial paths.

- Added the ability to set the `timeout` and `retry` properties on `Action` classes.
- Fixed a visual issue with the `Line` field's base text sizing.
- Fixed several visual issues with notifications.
- Fixed an issue preventing default values from being set on `Repeater` fields.
- Fixed an issue where the notification route wasn't available in some auth setups.
- Fixed an issue where `ActionEvent::target` expected the relationship to use the `SoftDeletes` trait.
- Fixed an issue preventing Global Search from using the `with` property on underlying resource models.
- Fixed an issue where Lenses were not respecting the `peekable` setting on `Field` s.
- Fixed an issue where `Date` fields were displaying negative one day when in negative offset timezones.
- Fixed a visual issue peeking hover cards and modals.
- Fixed an issue preventing `Select` components from allowing integer values.

v4.26.5 (Silver Surfer)

Released Jul 14, 2023

- Added some missing translations for the `Repeater` field.
- Fixed an issue preventing users from unsetting a `Date` field value.
- Fixed an issue where field events weren't firing for attach and update-attached views.
- Fixed an issue where `Repeater` fields weren't removing items when using the JSON preset.

v4.26.4 (Silver Surfer)

Released Jul 07, 2023

- Nova will now close the mobile menu when navigating to a new page.
- Fixed an issue where `Action::$withoutActionEvents` was being ignored in some scenarios.
- Fixed a visual issue on mobile with pagination.

- Fixed an issue with opening notifications in a new tab.
- Fixed an issue with dependent fields when using `gte` , `gt` , `lt` , and `lte` validation rules.
- Fixed an issue with repeatable fields not supporting Eloquent casting when using the `HasMany` preset.
- Fixed an issue with the `Heading` field not being reactive when using dependent fields.
- Fixed an issue where `Repeater` fields were incorrectly expecting a Nova resource when using the `JSON` preset.
- Fixed an issue preventing `VaporImage` fields not saving to the database through an inline `MorphOne` relationship.
- Fixed an issue where modals were not resetting their working state after failing.
- Fixed a visual issue with notifications when the message was too long.

v4.26.3 (Silver Surfer)

Released Jun 30, 2023

- Renamed an internal method.

v4.26.2 (Silver Surfer)

Released Jun 30, 2023

- Renamed an internal method.

v4.26.1 (Silver Surfer)

Released Jun 28, 2023

- Fixed references to `filled` utilities.

v4.26.0 (Silver Surfer)

Released Jun 27, 2023

- Added new **Repeater** field. (Beta) [Docs](#)
- Added performance improvements when using Laravel Scout, pagination and filters.
- Added ability to set the default ordering when defining Lens queries.
- Added new **openInNewTab** option for Notification actions.
- **Tag** fields will now avoid fetching all resources when clearing the input.
- **Tag** fields will now automatically attach a newly created resource.
- Metrics will now throw an **Exception** when trying to use **onlyOnDetail** combined with **refreshWhenFiltersChange** .
- Improved redirect logic for cancel buttons on forms.
- Added new **Action::sole** method to simplify displaying actions only when a certain resource is selected.
- Fixed an issue preventing setting the **BooleanGroup** field's value via **dependsOn** .
- Fixed an issue where **Date** fields were incorrectly displaying a timezone.
- Fixed an issue with **filterable DateTime** fields when using timezones.
- Fixed an issue preventing **filterable BelongsToMany** fields from working correctly on detail pages.
- Fixed a visual issue with **Code** fields when using right-to-left layouts.
- Fixed missing help text when using **HasOne** panels.
- Fixed a visual issue where Nova's auth layout was hardcoding text color.
- Fixed an issue where a **peekable** relation's hover card was getting stuck when a lot of hover cards were being displayed.

v4.25.1 (Silver Surfer)

Released Jun 06, 2023

- Fixed a visual issue with help text on panels.

- Nova will now throw an error when attempting to call `help` on `HasMany` fields.

v4.25.0 (Silver Surfer)

Released Jun 06, 2023

- Added new `Nova::userLocale` method adding the ability to resolve a user custom locale.
- Nova will send a new `fromResourceId` parameter when replicating resources.
- Added support for invocable actions when using the `dependsOn` field method.
- Improved IDE support.
- Fixed a visual issue where global search was not scrollable.
- Fixed a visual issue where `Markdown` field previews showed disabled scollbars regardless of content length.
- Fixed a visual issue where textareas were not being shown with consistent text color in light and dark modes.
- Fixed an issue where filter dropdowns would not closing when opening another dropdown.
- Fixed a visual issue where a `BelongsToMany` field's select options were hidden due to overflow issues.
- Fixed an issue where cascading dependency updates caused fields to not update correctly.
- Fixed an issue where selected resources were missing on action fields.
- Fixed an issue where searchable and filterable `BelongsTo` fields were incorrectly showing all options when their search term was reset.
- Fixed an issue where `Trix` fields were not updating if their value was changed programmatically.

v4.24.4 (Silver Surfer)

Released May 19, 2023

- Fixed an issue where the `File` field would not display `.webp` files.
- Fixed a visual issue with the peekable relation hover card.

v4.24.3 (Silver Surfer)

Released May 16, 2023

- Fixed a regression with the multi select component.
- Fixed an issue with translations when using searchable fields.
- Fixed an issue navigating to resource detail pages when using big ints.
- Fixed an issue with `KeyValue` field not respecting the `fullWidth` method.
- Fixed a regression with the `ExportAsCsv` action.
- Fixed an issue where the action dropdown didn't reset the selected value when closing the confirmation modal.
- Fixed an issue with dependent fields when setting the field value programmatically.
- Fixed an issue with `Tag` field when nested inside parent resource form.

v4.24.2 (Silver Surfer)

Released May 10, 2023

- Fixed an issue with `PendingTranslations` .

v4.24.1 (Silver Surfer)

Released May 05, 2023

- Fixed an issue where importing localization mixin would fail for custom components.
- Fixed an issue when testing action handle methods.

v4.24.0 (Silver Surfer)

Released May 04, 2023

- Added a new standalone action dropdown component next to the creation button.
- Added new "Closure Actions" feature. [Docs](#)
- Added new "Static Actions" feature. [Docs](#)
- Fixed a visual issue with search input's clear button.
- Fixed an issue with translations sometimes not working depending on when they were registered.
- Fixed an issue with Nova's File field dropzone.
- Fixed an issue where users would incorrectly get 200 responses on edit pages.
- Fixed an issue with **Markdown** fields being affected by other **Markdown** fields.
- Fixes an issue with trend metrics generating an incorrect timezone offset when combined with Daylight Saving Time.
- Fixed issues with **BelongsTo** , **MultiSelect** , and **BooleanGroup** fields when using dependent fields.

v4.23.0 (Silver Surfer)

Released Apr 07, 2023

- Added option to **Tag** to preload all available tags.
- Added ability to "peek" at relations inside the preview modal.
- Added some missing translations.
- Added ability for **Trix** fields to be dependent.
- Added ability to customize the logic for determining a menu item's current active state.
- Added ability to unlock **BelongsTo** and **MorphTo** fields when editing resources.
- Added ability to replicate **Markdown** and **Trix** field content when not using attachments.
- **MorphTo** relation modals now support sizing options.
- Nova will now check for "view" authorization when visiting Detail pages.
- Nova will now validate field attachments by default and display validation.
- Improved the display of preview modal titles.
- Fixed a visual issue with Date fields.

- Fixed an issue where field attachments didn't emit proper events.
- Fixed an issue with table sorting not following the **viaRelation** query string.
- Fixed an issue with **Date** fields where they would become unresponsive.
- Fixed an issue with **URL** fields not being **copyable**.
- Fixed an issue where attachments were not being properly discarded.
- Fixed a visual issue with table metrics when using long titles.
- Fixed an issue with custom route bindings conflicting with Nova.

v4.22.2 (Silver Surfer)

Released Mar 07, 2023

- Nova now supports **laravel/scout** version 10.
- Fixed various visual issues.
- Fixed an issue where filterable fields within stacks weren't shown in Lens filters.
- Fixed an issue with missing **getStoragepath** when using the **Markdown** field.
- Fixed an issue where select components converted string values of options to a big integer value.
- Fixed an issue where Lens were resolving values twice.
- Fixed an issue where toast messages couldn't be seen inside Auth views.

v4.22.1 (Silver Surfer)

Released Feb 23, 2023

- Added ability for fields within a **Stack** field to be filterable.
- Fixed an issue causing Trix field content to be duplicated on the update view.
- Fixed a zero-division issue with **Progress** metrics.
- Fixed an issue where search on a BelongsToMany relationship was broken when using Laravel Scout.
- Fixed an issue where **Boolean** field values were always false when using dependent fields.

- Fixed a visual issue with spacing on checkboxes with labels.
- Fixed an issue with peekable **BelongsTo** when used within a **HasManyThrough** relationship.
- Fixed an issue with Markdown field.
- Nova will now scroll to the top when using **Create** and **Add Another** buttons.
- Fixed an issue where **MultiSelect** fields were incorrectly showing a placeholder.

v4.22.0 (Silver Surfer)

Released Feb 08, 2023

- Added Laravel 10 support.
- Redesigned the "select all dropdown" to show the current selection count and adds easy selection clearing.
- Added ability to use **merge** , **mergeWhen** , and **mergeUnless** on panels.
- Fixed a visual issue with margins on **Heading** fields.
- Fixed an issue when using the **Line::extraClasses** method on the detail view.
- Fixed several issues with the **Markdown** field.
- Fixed an issue where the **preview** click action didn't check whether the resource was authorized to be viewed.
- Fixed an issue with using the incorrect query when running actions on a single resource.
- Fixed an issue where a user couldn't navigate away from an invalid page.

v4.21.0 (Silver Surfer)

Released Jan 17, 2023

- Lenses now support searching.
- Collapsible relationships no longer make API requests before they're revealed when collapsed by default.
- Added ability to hold **Command** or **Ctrl** while clicking global search results to open them in a new tab.

- Added **Ctrl** to the recognized modifier keys for other shortcuts.
- Fixed an issue with click actions on many to many relationships.
- Fixed an issue with **Status** fields not using the correct field value.
- Fixed an issue with validating unfillable fields.
- Fixed an issue with nested relationships when using **HasOne** or **HasOneThrough** fields.
- Fixed an issue with collapsable cards localStorage state.

v4.20.2 (Silver Surfer)

Released Jan 11, 2023

- Fixed an issue where **Gravatar** fields using the attribute "email" would not allow a **Text** field with the same attribute to be replicable.

v4.20.1 (Silver Surfer)

Released Jan 11, 2023

- Fixed an issue with collapsable elements.

v4.20.0 (Silver Surfer)

Released Jan 10, 2023

- Added the ability for menu sections, menu groups, detail relation fields, and panels to be collapsed by default with the **collapsedByDefault** method.
- Fixed an issue where **HasOne** fields weren't use the correct policy.
- Fixed a visual issue with partition metrics when resizing the viewport.

v4.19.6 (Silver Surfer)

Released Jan 03, 2023

- Added ability to preview SVG when using **File** fields.
- Added some missing language strings for **File** fields.
- Nova will now prioritize the thumbnail preview vs the preview url on index views.
- Updated the name of Turkey to the new official name "Türkiye".
- Fixed an issue where **MorphTo** fields were not correctly initializing their types.
- Fixed an issue where eloquent filters were preloading values incorrectly.
- Fixed a regression with **PartitionResult** .
- Fixed an issue with **Status** fields when using **displayUsing** .
- Fixed an issue where Nova's user resolver was not being passed in some circumstances.
- Fixed an issue where **storeOriginalName** was not working with inline relationships.
- Fixed a visual issue with excerpt line breaking.

v4.19.5 (Silver Surfer)

Released Dec 14, 2022

- Added new **Audio** field.
- Improved visual style of **Trix** fields in dark mode.
- Fixed and updated some Heroicons icons.
- Fixed an issue with related resource indexes appending pivot fields.
- Fixed a regression with Carbon 2.64 using **subDays(null)** .
- Added **useLocalization** composable to **laravel-nova** package dependencies.
- Fixed an issue where **Select** fields would display the first option even if the underlying value was null.
- Fixed an issue preventing Ctrl-clicking view and edit buttons.

v4.19.4 (Silver Surfer)

Released Nov 29, 2022

- Added support for `ulid` as an identifier when using action events.
- Added improvements for Nova's `User` stub files.
- Updated Trix field to use Laravel's built-in model pruning.

v4.19.3 (Silver Surfer)

Released Nov 22, 2022

- Added shortcuts for "Select All" (`ctrl+a` / `command+a`) and "Select All Matching" (`ctrl+shift+a` / `command+shift+a`).
- Fixed an issue where the `Tag` field always removed the first tag.
- Fixed an issue where `copyable` was not working on `Email` index fields.
- Fixed an issue where `BelongsTo` fields weren't broadcasting their changes.
- Fixed an issue where `Select` filters were not using the `searchable` option.

v4.19.2 (Silver Surfer)

Released Nov 16, 2022

- Fixed an issue preventing using `displayUsing` on `ID` fields.

v4.19.1 (Silver Surfer)

Released Nov 16, 2022

- Fixed an issue where relatable fields could cause n+1 queries.
- Fixed an issue where `Boolean` fields could not be set to false when using dependent fields.

- Added a missing translation for breadcrumbs.
- Gave breadcrumbs a little more visual space.

v4.19.0 (Silver Surfer)

Released Nov 15, 2022

- Added new breadcrumbs menu via the `Nova::withBreadcrumbs` method.
- Added ability to see the raw metric value in a tooltip.
- Added ability to copy the raw value of `Value` metrics using the `copyable` method.
- Added ability to customize the associatable query for `BelongsTo` and `MorphTo` fields.
- Added a link to view the full resource when viewing the resource preview modal.
- Added ability to translate select control default state text.
- Nova will now hide resource buttons if the user can't see any of them in the current result set.
- Nova will now display `HasOneThrough` fields the same way as `HasMany` fields.
- Fixed a visual issue with search input clear buttons.
- Fixed an issue with `Trix` endpoints not receiving all props.
- Fixed an issue where action fields were not showing correctly.
- Fixed an issue with filling attributes when cast as `array`.
- Fixed an issue when filling fields with wrong number of parameters.
- Fixed an issue with `canSee` not working on `MorphTo` fields.
- Fixed an issue with validating and resolving fields.
- Fixed an issue where the default help dashboard was showing its title incorrectly.

v4.18.2 (Silver Surfer)

Released Nov 03, 2022

- Various visual fixes

v4.18.1 (Silver Surfer)

Released Nov 02, 2022

- Various visual fixes
- Some code cleanups
- Fixed an issue where dependent event listeners weren't properly unloaded.

v4.18.0 (Silver Surfer)

Released Nov 01, 2022

- Added new `indexWidth` and `detailWidth` methods to `Image` and `Avatar` fields.
- Nova now throws a 404 when attempting to replicate a resource that doesn't exist.
- Nova will now handle namespaces when generating `Resource` classes.
- Nova will now disable the resource table row buttons instead of hiding them.
- Fixed an issue with partition metrics.
- Fixed an issue where `Tag` fields were using the attribute instead of the resource name.
- Fixed a visual issue with `Tag` fields when using dark mode.
- Fixed a visual issue with `Heading` fields. Heading fields also got a visual refresh.
- Nova will now use `data_set` when filling fields to allow for casting json and `AsArrayObject` attributes.
- Fixed some visual issues with `File` , `Image` , and `Avatar` fields.

v4.17.1 (Silver Surfer)

Released Oct 26, 2022

- Fixed a couple of issues with the new **Tag** field.

v4.17.0 (Silver Surfer)

Released Oct 25, 2022

- Added a new **Tag** field for creating **BelongsToMany** relationships inline.
- Added ability to set the inline creation modal's size using the **modalSize** helper.
- Added some missing translations.
- Fixed an issue with **HasOne** fields not correctly excluding irrelevant fields.
- Fixed an issue with N+1 queries when using peekable relations.
- Fixed an issue preventing the peekable view from persisting when trying to hover over a field in the view.
- Fixed an issue with Eloquent's new strict modes.
- Fixed a visual issue with Nova's modal backdrops not following the window scroll position.
- Fixed an issue with **MultiSelect** fields not triggering **readonly** when used with dependent fields.
- Fixed an issue with resolving relationships.
- Fixed an issue where **NotExactlyAttached** rules were not correctly validating in some scenarios.

v4.16.1 (Silver Surfer)

Released Oct 12, 2022

- Fixed some issues that arose from 4.16.0.

v4.16.0 (Silver Surfer)

Released Oct 12, 2022

- Added new **fieldsForPreview** method for specifying the fields displayed in the preview modal.
- Added support for Laravel 9's **InvokableRule**.
- Added ability to "peek" at **BelongsTo** and **MorphTo** relations when hovering over them using the **peekable** helper.
- Added **maxLength** helper to **Text** and **Textarea** fields which also displays the allowed characters left.
- Improved **HasMany** field authorization.
- Nova will now generate **Trix** field drafts server-side.
- Added new **fullWidth** helper to all fields to allow them to take up all the horizontal space in the panel.
- Fixed an issue where Nova wasn't binding the current resource when using dependent fields.
- Fixed an issue where null image fields caused the index view to show a confusing state.
- Fixed an issue where **Date** fields were displaying differently on detail views vs update views.
- Fixed an issue where a potential race condition could occur when using dependent fields.
- Fixed a visual issue where **Trend** metric tooltips could cause the page to show a horizontal scroll bar.
- Fixed an issue where **Heading** fields could send invalid data when submitting forms.
- Fixed an issue where **Badge** icons were using the incorrect value for display.
- Fixed a visual issue with the Heroicons 'academic' outline icon.
- Fixed a visual issue when using fields with centered text.
- Fixed an issue with **Value** metrics where using negative previous values resulted in inconsistent change percentages.
- Fixed a visual issue with **Create** and **Attach** buttons on smaller viewports.
- Fixed an issue with placeholders not being respected on some fields.
- Fixed an erroneous translation.
- Fixed a visual issue with **Trix** field CSS.
- Fixed an issue when pressing the return key on attach and update views.

Released Sep 27, 2022

- Fixed an issue where **VaporFile** fields were not uploading correctly.
- Fixed an issue where **Markdown** previews could error when previewing empty values.
- Fixed an issue where filter fields could not be correctly closed in some circumstances.

v4.15.1 (Silver Surfer)

Released Sep 21, 2022

- Fixed an issue where Heading fields wouldn't correctly reactive to field changes.
- Fixed an issue where morph types were not emitted when using searchable.

v4.15.0 (Silver Surfer)

Released Sep 20, 2022

- **File** fields have been redesigned, show a preview, and now support drag and drop.
- Added ability to prevent ordering of many to many relationships when using Scout.
- Added even more sizing options to action confirmation modals.
- Improved the styling of checkboxes throughout Nova's interface.
- Fixed an issue where no loading indicator was shown when deleting or force-deleting resources.
- Fixed an issue preventing Axios errors from being properly intercepted.
- Fixed an issue where Nova's exception reporting was being ignored.
- Fixed an issue where **Color** fields would display with a disabled state.

v4.14.3 (Silver Surfer)

Released Sep 14, 2022

- Fix error in compilation for 4.14.2

v4.14.2 (Silver Surfer)

Released Sep 14, 2022

- Improve the visual style and UX for copyable fields.

v4.14.1 (Silver Surfer)

Released Sep 13, 2022

- Fixed an issue with determining whether a dashboard is Nova's help card.

v4.14.0 (Silver Surfer)

Released Sep 13, 2022

- Added ability to show a refresh button for Dashboards using the `showRefreshButton` helper.
- Added ability to set the action modal size via the `size` helper.
- Added ability to make the action modal fullscreen via the `fullscreen` helper.
- `Badge` fields are now `filterable`.
- Added ability to set a custom redirect after impersonating another user.
- Added missing translations for the export to CSV action.
- Added ability to add job batching within an action's handle method.
- Slug fields now return their preview from the server.
- Added `Field::isValidNullValue` helper method to fields.
- Added ability to pass a callback to `showOnPreview`.
- Fixed an issue with `displayUsing` when using `File` fields.

- Fixed an issue where resources without an **ID** field would throw an Exception in some cases.
- Fixed an issue where using **displayUsing** on **DateTime** fields would incorrectly show the value as null.
- Fixed an issue where metrics would refresh twice on initial page loads.
- Fixed an issue where **Markdown** field previews would not work if using model data in its view policy.
- Fixed an issue with nested relationships when creating/updating outputting incorrect form data.
- Fixed an issue with filling pivot fields when using readonly fields.
- Fixed an issue with actions failing when ran against a row excluded by the parent resource's **indexQuery** .

v4.13.0 (Silver Surfer)

Released Aug 23, 2022

- Nova can now use any **hsl()** , **rgb()** , or **rgba()** string as valid branding color values.
- Added visual improvements for fields with previews like **Twix** , and **Markdown** .
- Added ability for user-defined presets when using **Markdown** fields.
- Added ability for users to specify the target window when using menu items.
- Panels will now listen for changes, which allows them to be shown or hidden based on other fields.
- Added a developer API which allows fields to return a preview.
- Added ability to specify suggestions for **Color** fields.
- Improved error messaging for fields.
- Improved error messaging for **VaporFile** and **VaporImage** fields when users are not authorized to upload.
- Lots of code cleanups, new tests, and refactors.
- Fixed issue with branding colors where valid rgba strings were not honored.
- Fixed an issue where **DateTime** filters fields weren't respecting the user's timezone.
- Fixed an issue where **Markdown** fields weren't emitting change events.
- Fixed an issue where **KeyValue** fields were not reactive when a default value was specified.

- Fixed an issue where toggling between fields using dependent fields when fields shared the same component.
- Fixed an issue with **DateTime** fields no respecting the value from **displayUsing**.
- Fixed an issue where global search wasn't disabling page scroll
- Fixed an issue where email fields weren't showing in the filter list.
- Fixed a visual issue with **KeyValue** fields when using them in an action modal.
- Fixed an issue where Nova wouldn't correctly apply validations from inline HasOne relationships.
- Fixed an issue where Nova wouldn't close a search input when clicking away.
- Fixed an issue where **Markdown** fields were not reactive when a default value was specified.
- Fixed an issue where global search wasn't closed correctly when the value is set to an empty string

v4.12.14 (Silver Surfer)

Released Aug 02, 2022

- Added support for **laravel/ui** version 4.
- Added support for **fast-excel** version 4.
- Fixed an issue with **Date** and **DateTime** fields not using the correct value for display.
- Fixed an issue with missing relation creation button on **MorphToMany** fields.
- Fixed a visual issue with toggling relation views.
- Fixed an issue with redundant serialization on **URL** fields.
- Fixed an issue where clicking on actions in table metrics would not open external links.

v4.12.13 (Silver Surfer)

Released Jul 27, 2022

- Fixed an issue where **Text** fields wouldn't always consistently return a string.

- Fixed an issue where **Value** metric results using the **transform** helper weren't being serialized correctly when cached.
- Fixed an issue where default values weren't being updated when using dependent fields.
- Nova will now handle policy responses.
- **MenuSection** and **MenuGroup** will no longer show when there they have no children.
- Fixed an issue with **Badge** , **PanelItem** , **Code** , and **Stack** , when using **displayUsing** .
- Fixed a visual issue where there was no visual indication of the page when using **link** pagination type.
- Internal refactors and testing improvements.

v4.12.12 (Silver Surfer)

Released Jul 21, 2022

- Fixed an issue with Select filters not working correctly in certain circumstances.
- Fixed an issue preventing custom action response modals from being shown on index views.

v4.12.11 (Silver Surfer)

Released Jul 20, 2022

- Queued actions will now use the last result for the action success message if provided.

v4.12.10 (Silver Surfer)

Released Jul 20, 2022

- Nova will now show destructive actions in red text on the detail inline action dropdown.

v4.12.9 (Silver Surfer)

Released Jul 20, 2022

- Nova will now show destructive actions in red text on the inline action dropdown.

v4.12.8 (Silver Surfer)

Released Jul 20, 2022

- Fixed an issue where table metrics could not be properly cached.
- Nova will now throw an exception when trying to use an unsupported helper on **TextArea** fields.

v4.12.7 (Silver Surfer)

Released Jul 19, 2022

- Fixed an issue where Nova wouldn't restore the "remember me" state after impersonating another user.
- Fixed an issue where **BelongsTo** fields wouldn't submit their value when using dependent fields.

v4.12.6 (Silver Surfer)

Released Jul 13, 2022

- Nova will now reset the query string when navigating between resources.

v3.16.3 (Orion)

Released Dec 04, 2020

- Handle nova path `/` on domain with custom port
- Fixes invalid `yarn.lock` on `v3.16.1` and `v 3.16.2`

v3.16.2 (Orion)

Released Dec 03, 2020

- Fixed broken `package.json` that was loading a local `laravel-nova` dependency

v3.16.1 (Orion)

Released Dec 03, 2020

- Fix Nova running on a subdomain under the `/` path

v3.16.0 (Orion)

Released Dec 01, 2020

- Added new testing improvements.
- Added documentation on running tests.
- Added visual improvements to `Slug` fields.
- Added resource ID segment to creation pivot fields route.
- Nova will now force reload session is expired.
- Added the `Field` instance as a paramater to `relatableQuery` method.
- Added UX improvements to index field sorting.
- Nova will now unbind `NovaRequest` when the HTTP kernel has finished.
- Nova will now reset lens filters when navigating between lenses.
- Added memory usage improvments.
- Added suggestions support to `Text` fields when used via an action.

- Added ability to display morphable relations even if they're not defined in the **MorphTo** field.
- Fixed an issue when constructing **HasManyThrough** fields with custom resource classes.
- Nova will now avoid loading its service provider when served via subdomain on the root.
- Fixed issue with lenses not applying **authorizedToSee** logic.
- Fixed visual bug with menus and standalone actions.
- Fixed an issue with updating resource IDs and repulling fields.
- Fixed an issue with overwriting existing values in **BelongsTo** and **MorphTo** fields.
- Fixed an issue preventing validation errors from hiding when successfully attaching.
- Fixed an issue preventing **Currency** and **Textarea** fields from triggering form abandonment prevention.
- Fixed an issue with Nova's **ActionEvent** auth guard model.
- Fixed an issue where resource attachment page title would show **undefined**.
- Fixed partition metric styling when set to full-width.
- Fixed an issue where navigating to a non-existent resource would not trigger a 404 error.
- Nova will now on delete **ActionEvents** when a resource is force-deleted.

v3.15.0 (Orion)

Released Nov 10, 2020

- Added "Start Polling" and "Stop Polling" language translations.
- Added various testing improvements.
- Nova will now use **getQualifiedCreatedAtColumn** method when calculating values for **Value** and **Trend** metrics.
- Nova will now keep track of pending file uploads before enabling the submit button.
- Nova version is now defined inside of **composer.json**.
- Added ability to customize the search keyword based on the column.
- Added support for displaying **DateTime** fields with fractional seconds.
- Nova will now apply **indexQuery** to make selecting resources and select all matching more consistent when not viewing from viaRelationship.

- Nova will now only execute a database query if the **Request** has a **resourceId** .
- Added ability to wrap metric **\$column** using **DB::raw()**
- Added ability to use a custom **dashboard.stub** when present.
- Nova will now show an error if an uploaded attachment triggers a server error.
- Nova actions will now use the guard set inside Nova's configuration to match user models.
- Added new **nova:translate** Artisan command to make creating custom translations easier.
- Nova will bind the current request type to **NovaRequest** .
- Fixed issue causing "Update undefined" in title when updating **BelongsToMany** fields.
- Fixed issue with page titles when using a **HasOne** field on a resource.
- Fixed issue preventing **HasOne** field from being filled when creating via a resource.
- Fixed issue when using **NULL** values inside searches.
- Fixed issue with z-index on **Value** and **Trend** metrics.
- Fixed "ErrorException - no failed method" error when using actions.
- Fixed issue where having resource polling enabled closed open modals.
- Fixed issue causing the **perPage** option to be overwritten.
- Fixed issue where **Trix** fields wouldn't trigger form abandonment prevention.
- Fixed issue where **File** fields weren't prunable if hidden from the detail view.
- Fixed issue with **VaporFile** fields when its key is undefined.
- Fixed issue where filters would close when using **Date** filters.-js

v3.14.0 (Orion)

Released Oct 27, 2020

- Added new **HasManyThroughField** field type.
- Added new **HasOneThroughField** field type.
- Added new button to toggle polling.
- Improvements to **detailQuery** and actions.
- Fixed regression issue with **redirectAfterDelete** .
- Fixed serialization issue with Partition metrics.

- Fixed issue with long titles being truncated too soon.
- Fixed issue when using inline relations with **BelongsTo** and **Image** fields.
- Fixed "Invalid text representation" error with search.
- Nova will now avoid filling a **VaporFile** attribute when missing from the request.
- Nova will now show proper validation errors when a multiple duplicate relations.
- Fixed issue with computed fields being resolve twice for index.

v3.13.0 (Orion)

Released Oct 20, 2020

- **Select** fields now broadcast field attribute change events.
- Added missing translations keys for page titles.
- Improved resource usage when using **suggestions** option.
- Added Nova Dusk tests to the main Nova repository.
- Fixed issue with flatpickr not being available in Vue watch events.
- Fixed display issue with long page titles on detail views.
- Fixed width issue with default **Gravatar** configuration.
- Fixed issue with ordering when resetting Lenses.
- Fixed incorrect lens pagination when using a "having" query.
- Fixed issue where **contenteditable** fields would trigger global shortcuts.
- Fixed regression in **Currency** field when using **nullable** option.
- Fixed issue with field names in action validation error messages.
- Fixed an issue where all cases were required when customizing partition metric colors.
- Fixed issue preventing **BelongsTo** fields from being sortable on on Lenses.
- Fixed issue when using "select all matching" with MSSQL databases.

v3.12.1 (Orion)

Released Oct 07, 2020

- Fixed regression with causing duplicate fields on the index view.
- Inline Actions are now correctly resolved for Lenses.
- Fixed issue showing help text on attachment update view for pivot fields.

v3.12.0 (Orion)

Released Oct 06, 2020

- Added support for friendly page titles.
- Fixed an issue with **BelongsTo** fields and default values.
- Fixed a regression in the **Resource searchable** method.
- Fixed an issue with **Date** filters that prevented them from clearing their input when reset.
- Fixed an issue with incorrect model namespacing when generating new resources.
- Fixed errors that occurred when firing change events for fields.
- Fixed an issue preventing **Code** fields from displaying their data on edit forms.
- Fixed an issue preventing **MorphTo** fields from fill their values correctly.
- Fixed an issue with preventing form abandonment in **BelongsToMany** fields.
- Fixed an inconsistency between **Currency** and **Number** fields when handling **NULL** values.
- Fixed an issue preventing the deletion of images on **HasMany** fields.
- Fixed an issue preventing **File** and **Image** fields from being downloadable if only defined in **fieldsForDetail** method.
- Fixed an issue preventing fields from filling when using polymorphic relations.
- Fixed a regression causing translation naming collisions when using **label** and **singularLabel** methods on **Resource** s.

v3.11.1 (Orion)

Released Sep 29, 2020

- Fix regression with "undefined constant 'searchable'".

v3.11.0 (Orion)

Released Sep 29, 2020

- Added ability to specify **viewable** method for **MorphTo** fields.
- Added ability to specify "Standalone Actions" for Lenses.
- Added ability to set custom context on **Currency** fields.
- Added support for default values inside **BelongsTo** and **MorphTo** fields.
- Added selection change JavaScript events for **BelongsTo** , **MorphTo** , **Attach** , and **UpdateAttached** views.
- Added support for help text when using **Action** fields.
- Fixed an issue causing **Trend** metrics to use incorrect suffix inflection.
- Fixed an issue preventing the "required" field indicator from showing on **Action** fields.
- Fixed an issue preventing default values from working correctly on **Date** fields.
- Fixed an issue when resolving reverse relations for prefilling fields.
- Fixed an issue preventing the index search field from correctly showing.
- Fixed an issue where the trashed filter would disappear in certain scenarios.

v3.10.0 (Orion)

Released Sep 15, 2020

- Added new "standalone" actions for running actions without selecting resources.
- Added ability for resources to auto-refresh their index listing.
- Added ability to customize the debounce of global search.
- Added ability to customize the search debounce of individual resources.
- Added ability to customize the number of results returned from Laravel Scout search queries.
- Fixed an issue preventing the **Slug** field from showing on create forms.

- Fixed an issue where the search parameter for a resource was `undefined` .
- Fixed an issue preventing users from using version 3.0 of `laravel/ui` .

v3.9.4 (Orion)

Released Sep 14, 2020

- Fixes issue with `Trix` field where it's value wasn't being correctly sent.

v3.9.3 (Orion)

Released Sep 14, 2020

- Fixes issue with picking dates using the Date field.
- Fixes incorrect version number in footer.
- Adds translation for the `Slug` field's "Customize" text.

v3.9.2 (Orion)

Released Sep 09, 2020

- Fix issue where `Slug` field could not be both readonly and listen for change events when creating resources.

v3.9.1 (Orion)

Released Sep 08, 2020

Fixed issue with `Slug` field where its from attribute was hard-coded.

v3.9.0 (Orion)

Released Sep 08, 2020

- Nova has been updated for compatibility with Laravel 8.
- Added a new **Slug** field which allows for creating a unique URL identifier from another **Text** fields value.
- Added a new **placeholder** helper method to set placeholder values for form fields.
- Action fields now support providing default values.

- Added the ability to customize the CSS classes used for **Action** and inline **Action** confirmation buttons.
- **Panel** s are now **Macroable** .
- Fixed issue when saving 2 Vapor file fields on the same resource.
- Fixed issue when using Nova themes when using a reverse-proxy setup.
- Fixed visual issue with **Metric** help icon z-index.
- Nova will now use refs when initializing **Place** fields.
- Nova will now use translations on many of its default stubs.
- Fixed issue with the **DateTime** field's picker display formats.

v3.7.1 (Orion)

Released Jun 30, 2020

- Fix issue with using **--no-interaction** option when creating tools.
- Fix PHPStan typehint issue

v3.7.0 (Orion)

Released Jun 23, 2020

- New: Stack Fields allow you to display multiple **BelongsTo** , **Text** , and new **Line** fields with additional formatting features.
- Added ability to have dynamic pivot fields.
- Added **--no-interaction** option to **make:tool** command to speed up process.
- You can now change the guard used for Nova's forgot-password feature.
- Fixed issue when resolving **null** values in **Currency** fields.
- Fixed some default styles introduced in recent Chrome updates.

- Create and Update forms will now show any additional non-validation errors via popup.

v3.6.0 (Orion)

Released May 12, 2020

- Added filtering ability to **Select** fields.
- Added option to set precision for Trend metrics.
- Fixed visual issue with Nova sidebar.

v3.5.0 (Orion)

Released Apr 28, 2020

- Fixed issue where the resource manager was not correctly honoring Resource **availableForNavigation** visibility.
- Added **storeAs** and **path** helpers to **VaporFile** and **VaporImage** fields.
- Searchable relation fields can now optionally show the resource subtitle in their results.
- Added ability to lock keys for editing on **KeyValue** fields.
- Added ability to prevent adding and removing rows on **KeyValue** fields.

v3.4.1 (Orion)

Released Apr 23, 2020

- Nova now supports using Chronos v2.
- Fixed an issue with deletable **File** input visibility.
- Extracted Resource Collection helpers

v3.4.0 (Orion)

Released Apr 14, 2020

- Added new **default** method for specifying default values within **Field** s.
- Added new **Hidden** input field.
- Nova's **availableForNavigation** method now honors the **displayInNavigation** property of resources.
- Fixed visual alignment issues with **BooleanGroup** fields.
- Fixed issue resolving fields with default attributes on create forms.

v3.3.2 (Orion)

Released Apr 09, 2020

- Fixed **nova:install** command not resolving stub paths.

v3.3.1 (Orion)

Released Apr 09, 2020

- Fixed stub path when stubs haven't been published.
- **FileField** will now honor the **rounded** settings.
- Creation fields will no longer be resolved unnecessarily.

v3.3.0 (Orion)

Released Apr 08, 2020

- Added support for Computed fields using a display callback. Previously this worked by accident, but it's now an official feature.

- Added support for adding help text to **Panel** s.
- **Panel** fields now support the **make** method allowing for a cleaner syntax.
- Added a few visual improvements to File fields.
- Nova will now use the **globalSearchResults** limit amount when searching using Scout.
- Added support for hiding **true** or **false** values from **BooleanGroup** fields.
- Nova's stubs are now able to be published for customization.
- Added **withoutTrashed** method to disable showing the trash checkbox on **MorphTo** fields.
- Added minor units support to **Currency** fields.
- Fixed an issue with resolving fields when using Laravel 7.3.
- Fixed some performance issues with **Code** fields and large documents.
- Fixed an issue where pivot fields were not being filled correctly when updating relations.
- Fixed an issue with modals closing when adding attachments to a **Trix** fields.
- Fixed an issue with **File** fields showing the delete button when set to read-only mode.
- Fixed showing of the create-relation button on **MorphTo** fields.

v3.2.1 (Orion)

Released Apr 03, 2020

- Use Tailwind's default leading classes.
- Show button for inline action selector when only one inline action exists.
- Fix **MorphTo** fields not displaying correctly.

v3.2.0 (Orion)

Released Apr 01, 2020

- Fixed several issues with inconsistent Markdown editing and rendering.
- Fixed an issue where Pivot Field visibility settings were not being honored.

- Fixed issue where custom attachable relationship attributes were not being validated.
- Fixed issue preventing computed fields from resolving for display.
- Added new **warning** notification type for use with **Nova.warning** method.
- Added ability to completely hide **ID** fields from Nova.

v3.1.0 (Orion)

Released Mar 17, 2020

- Added new **VaporFile** and **VaporImage** fields to provide upload capability for Laravel Vapor projects.
- Added new **fieldsForIndex** , **fieldsForDetail** , **fieldsForCreate** , and **fieldsForUpdate** methods for defining resource fields only on those screens.
- **BooleanGroup** fields can now be marked as read-only.
- Nova will now lowercase the email passed to **Gravatar** .
- Fixed an issue preventing **Currency** fields from being treated as HTML correctly.
- Fixed an issue preventing validation errors from being correctly passed to **Currency** fields.
- Updated the inline action selector to use a select box instead of a dropdown menu.
- Nova will now only show the trashed filter when a user can force delete or restore a resource
- You may now specify a range to be the default when registering **Value** and **Trend** metrics.

v3.0.2 (Orion)

Released Mar 07, 2020

- Address issues with Laravel Nova and Laravel 7.x route caching.

v3.0.1 (Orion)

Released Mar 03, 2020

- Fixed an issue with Nova commands being incompatible with Symfony 5.0

v3.0.0 (Orion)

Released Mar 03, 2020

Laravel Nova v3.0.0 provides compatibility with Laravel 7.x. Applications that are utilizing Laravel 6.x should continue using the Nova 2.x release series.

v2.12.0 (Orion)

Released Mar 03, 2020

- "Create relation" button can now be hidden
- A redirect can now be specified after deleting a single resource
- Fixed a couple of issues when storing files with **Trix** fields
- Header components are now properly registered
- Fixed "Create & Add Another" button not showing on **HasMany** fields
- **ActionEvent** s will now write to the correct connection
- Fixed event listeners for **CheckboxWithLabel** component
- **BelongsTo** fields now respect custom placeholders

v2.11.1 (Orion)

Released Feb 19, 2020

- Fix regression for some users caused by wrapping all operations in transactions

- Fix some issues with **Currency** field

v2.11.0 (Orion)

Released Feb 18, 2020

- Fixed issue where **BelongsTo** and **MorphTo** fields would show the 'create relation' button, even if the field was set to readonly mode.
- Fixed issue where Lens action field validation was not being honored.
- Fixed issue preventing **BelongsTo** fields from displaying the correct label
- Nova will now use a database transactions for detachment, destroy, force-delete, and restoration of resources.
- Added ability for **Text** fields to offer suggestions in supported browsers.
- Nova vendor requests will now be included in **isNovaRequest** checks.
- Fixed issue which prevented nested resources from being generated correctly.
- Added custom headers to create forms, lenses, and dashboard views.
- Fixed **Currency** field to be compatible with PHP 7.4.

v2.10.1 (Orion)

Released Feb 05, 2020

- Fixed issue which prevented users from creating resources when using shortcuts.

v2.10.0 (Orion)

Released Feb 04, 2020

- Added ability for users to create related resources on **BelongsTo** and **MorphsTo** relation type on create and update views.
- Added ability for users to clear table sorting by clicking table headings to remove sorting.

- Added ability to use custom resource sorting in Nova's sidebar
- Metrics now honor a custom user timezone set with the `Nova::userTimezone(callback)` helper method.
- Metrics will now refresh their data when resources are deleted or restored in the table view. Also added a new event custom tools and metric can listen for.
- Decoding filters values from the UI has been extracted to a helper class to enable use in calculating metrics and custom tools.
- Fixed issue where Nova allowed users to create extra `HasOne` relationships via the UI

v2.9.4 (Orion)

Released Jan 21, 2020

- Nova will now use the configured `ActionEvent` model defined in any configured custom `ActionResource` resource.
- Nova's default configuration now includes the previously-hidden `domain` option.
- Nova's default migrations have been changed to `bigInteger` types.
- Fixed an issue decoding filters with PHP 7.4

v2.9.3 (Orion)

Released Jan 07, 2020

- Adds ability to add more-descriptive class names to Nova's Vue components using new `Nova::enableThemingClasses()` method.
- Nova will now use the give field name first for determining a field's label..
- Fixed issue where Nova wasn't detaching all resources in "Select All" scenarios on large resource amounts.
- Changed `Markdown` link insertion to use GitHub's `url` placeholder text instead of `http://`.
- Fixed issue with Lenses where an `ID` field was required.
- Fixed issue with Lenses where executing an action did not reload the resource listing.
- Nova will now correctly disable select all fields when no `ID` field exists.

- Nova will now look for Resources in the application namespace.
- Fixed issue in Edge browsers where checkboxes would not correctly fire their events.

v2.9.2 (Orion)

Released Dec 11, 2019

- Fixed regression where NULL Date values were not allowed.

v2.9.1 (Orion)

Released Dec 11, 2019

- Fixed inability to translate the "View" text for BooleanGroup fields.
- Fixed regression where NULL DateTime values were not allowed.

v2.9.0 (Orion)

Released Dec 10, 2019

- Fixed updated country names to be more correct and fix some typos.
- Fixed an issue where readonly wasn't working correctly for KeyValue fields.
- Fixed issue which required one to put the BelongsTo and BelongsToMany fields in a certain order.
- Fixed issue where singularLabel wasn't being respected on BelongsTo and HasOne fields.
- Fixed issue where Nova wasn't using the correct guest guard for the ResetPasswordController
- Fixed URI keys for Cards.
- Added ability for File and Image fields to set the Accept attribute.
- Fixed issue with duplicate Resources.
- Nova will now send extra parameters when fetching Filters.

- Nova will now call the resolver callback even if the field attribute isn't present on the underlying model.
- Nova will now use the Model instance being updated to retrieve validation rules.
- Nova now allows you to set Policy rules for ActionEvents.

v2.8.0 (Orion)

Released Nov 26, 2019

- Added new **withoutTrashed** method to explicitly hide the **Show Trashed** checkbox on **BelongsTo** fields.
- Added ability to customize where Global Search links should point.
- Nova will now avoid resolving non-related fields when resolving **Avatar** fields.
- Added ability to disable Nova's 'traffic cop' feature when updating resources.
- Added ability to specify the language for **Place** fields.
- Nova will now resolve the preview for searches.
- Nova will now use its **nova.guest** setting when determining guests for its "forgot password" flow.
- Nova now allows you to set the rounding precision for partition metrics.
- Fixes issue where **withMeta** calls were not being serialized with their payload.
- Fixes issue where **Sparkline** fields were not hidden from Create and Update views.
- Fixes issue with creating uri keys for non-English Lens, Metric, and Action names.
- Fixes issue where a two-item **Collection** would trigger errors in **Select** fields.
- Fixes visual alignment of resource table row icons.
- Fixed issue where Nova fields would not stack correctly.

v2.7.1 (Orion)

Released Nov 13, 2019

- Adds ability for third-party packages to register their own shortcuts
- Fixes issue with new Value metric **allowZeroValue** functionality.

- Fixes issue with international keyboards and Global Search

v2.7.0 (Orion)

Released Nov 12, 2019

- Added new **allowZeroResult** to have values of zero to not be considered as "no data".
- Added ability for Markdown and Trix fields to listen to field update events.
- Added ability for search results to be limited per-resource via a new **globalSearchResults** option on the resource.
- Added ability to use a custom **ActionResource** class, which is useful for adding fields and other functionality.
- Added new **Nova::report** method, which allows for customizing Nova's error reporting.
- Added ability for **BooleanGroup** field to use a **Collection** or **Closure** to return options
- Added ability to add custom header components for all Nova's views.
- Added ability for Nova custom scripts and styles to be cached by the browser.
- Added new **Sparkline** field for showing small line graphs on resources detail and table row views.
- Nova now includes updated **Country** field translations to match the current ISO standard
- Added ability for custom connection-based Trend date expressions
- Added ability to store Trix attachments in sub-folders
- Nova will now pass an instance of **NovaRequest** to metrics
- Fixed issue where pagination was showing for **HasOne** fields.
- Nova will now escape **Textarea** field content when displaying it.
- Nova now allows for installation of **spatie/once** at version 2.0
- Nova will now avoid resolving fields for certain situations where the value isn't needed.
- Fixed issue with "Select All" menu on Lenses.
- Fixed issue with validation not working when trying to add value to a nullable **BelongsTo** field.

- Nova will now check if a method exists when using a callable array for **Select** field options.
- Nova will now return **FieldCollection** objects.
- Fixed issue which broke 3rd-party packages when checking if a field is required.

v2.6.1 (Orion)

Released Oct 29, 2019

Fixed issue with user menu not showing when upgrading Nova.

v2.6.0 (Orion)

Released Oct 29, 2019

- Added new Boolean Group field type.
- Improved checkbox handling and accessibility.
- Improved visual style of the "Select All" dropdown.
- Fixed issues with menu positioning.
- Fixed several issues with the display of tooltips.
- Fixed issue with incorrect parameter names in BelongsTo fields.
- Fixed issue with timezone parameters in Value metrics.
- Fixed issue with Tool stubs not getting compiled correctly.
- Nova will now correctly check the primary key is within the **search** array on a resource.

v2.5.0 (Orion)

Released Oct 15, 2019

- Nova will now refresh resources in the index list when inline actions are ran.

- Added ability to customize an action modal's confirmation, cancel button, and run button text.
- Added ability to mark fields as required using boolean or closure.
- Added ability to refresh metrics when actions are run.
- Added ability to show help text inside metrics.
- Improved styling of Image loader while loading.
- Added ability to customize Nova's password broker.
- Nova will now pass `viaResource` , `viaResourceId` , and `viaRelationship` parameters for `BelongsTo` and `MorphTo` field types.
- Nova now allows you to set the precision amount for Value metrics.
- Nova will now emit a `resource-loaded` event on its update form.
- Added new `withoutTableOrderPrefix` to customize how lens data is pulled from the database.
- Added ability to pass unique parameters to Dashboard.
- Nova will now apply formatting logic to metric tooltips.
- Fixed issue where some forms requests were being sent multiple times.
- Fixed issue where metric charts were not filling correctly.
- Fixed issue with autocomplete on Date filters.
- Fixed issue where modal's would close when picking dates.
- Fixed issue with Value metric timezones being calculated incorrectly.
- Fixed issue where padding was not correctly applied for resource index views with filters.
- Fixed issue where `displayUsing` was no longer working on `BelongsTo` fields.

v2.4.0 (Orion)

Released Oct 01, 2019

- "Inline Actions": added ability to show Actions inline in their own menu on individual resource table rows.
- "Load More Pagination": added third pagination type which allows you to load more resources on the same index view.
- Added ability to set the placeholder on Select fields.
- Added ability to translate form submission error text.

- Added support for negative value trends.
- Nova will now honor HTML 5 validation on Create and Update forms.
- Fixed the **today** metric calculation method.
- Fixed regression where Nova no longer honored the initial value of **perPageOptions** when fetching resources.
- Fixed issue with special characters being used inside Nova's site name.
- Fixed an issue where Nova would fetch a resource twice during updating it.
- Added a "show more" SVG icon.
- Miscellaneous refactoring and code-cleanups.

v2.3.1 (Orion)

Released Sep 17, 2019

- Fixed some styling issues in Search inputs.
- Fixed an issue where Image fields were incorrectly rounded by default.
- Text fields now show a dash when their values are null.
- DateTime fields now show a dash when their values are null.
- Metric select boxes visual style has been improved across different browsers.
- The Boolean field's visual style has been updated to use icons for showing values.

v2.3.0 (Orion)

Released Sep 10, 2019

- Added ability to configure Algolia app ID and API keys for the Place field.
- Added Nova's cancel buttons to the tab index.
- Nova's search inputs have been updated for a cleaner appearance.
- The KeyValue field has been updated for a cleaner appearance.
- Nova will now show a popup error message to the user if a validation error prevents a form from being submitted.
- Added new **success** and **error** methods to Nova's global JavaScript object to handle toast messages.

- Fixed issue where **ActionResource** couldn't find it's columns if the labels had been translated.
- Nova's global search will now honor the rounded setting for the avatar which represents it.
- Added ability to create a theme that would be applied to Nova's auth, password reset, and registration views in addition to the app itself.

v2.2.0 (Orion)

Released Sep 03, 2019

- Added ability to limit the number of fields displayed in a panel.
- Added ability to customize the rounding of Avatar, Gravatar, and Image fields.
- Added ability to disable suffix inflection on Metric value labels.
- Added ability to customize the date picker format used in the flatpickr JavaScript component.
- Added "Today" date range for metrics.
- Fixed an issue where the "last retrieved at" data for a resource was not being updated correctly.
- Fixed issue where long strings would overflow a panel field.
- Fixed issue where Trend Metrics were not displaying 0 values.
- Fixed various visual issues.

v2.1.1 (Orion)

Released Aug 22, 2019

- Adds ability to stack field labels and form elements.
- Improves Laravel 6 compatibility.
- Fixes issue with determining the uri key for Dashboards.
- Fixes issue with determining the **sortableUriKey**

v2.1.0 (Orion)

Released Aug 20, 2019

- Nova now supports multiple Dashboards.
- Improved support for MSSQL.
- The Boolean field is now color blind friendly.
- Nova now uses Numbro instead of Numeral for JS number formatting.
- Nova now correctly filters different resources but which use the same base-relationship.
- Fields can now change their text alignment.
- Added ability to pass a **closure** to field visibility methods.
- Fixed a UX issue with Metrics.
- The Lens stub now comes with the **cards** method already defined.
- Nova will now warn the user when a Resource name conflicts with one of its reserved words.
- BelongsTo fields can now be sorted.
- Trix field can now store data outside of the database
- Several Laravel v6 fixes.

v2.0.11 (Orion)

Released Aug 13, 2019

- Added new **meta** partial to allow for customizing the **<head>** element of Nova. This is useful for adding things like favicons, meta tags, etc.
- Added ability for users to load their own custom translations.
- Added ability to redirect using Vue instead of a hard redirect.
- Increased tooltip width on Metrics.
- Nova will no longer show the trashed state on readonly resources.
- Nova will now show a warning label when no morphTo types are available.
- Nova now allows Select fields to not be nullable.
- Nova will now use the fully-qualified class name inside of its Blade templates.
- Fixed cursor position within MarkdownField when switching to write mode

- Fixed `SelectControl` on Edge.
- Fixed issue where SQLite doesn't use ISO week numbers
- Fixed visual issues with error views.

v2.0.10 (Orion)

Released Aug 07, 2019

- Nova is now compatible with Laravel v6.
- Nova will now correctly send the `editing` and `editMode` parameters when doing create, update, attach, and update-attached requests.
- Added some missing translation keys
- Nova will now reset validation errors when an action is cancelled.
- Added `suburb` method to `Place` field.
- Nova now allows you to translate `Action` status labels.
- Queued collections now dequeue in the same order
- Nova will now check for a `package.json` in the application root before attempting to add Nova `Tool` scripts.
- Fixed issue with using `Esc` key when closing modals.
- Apply `JSON_UNESCAPED_UNICODE` to `Code` field options.
- Apply `JSON_UNESCAPED_UNICODE` to `AssetCommand` field options.
- Remove some unused styles from Tailwind
- Nova will now use natural ordering for attachable resources.
- Nova now allows you to specify a `Closure` for `Select` fields options.
- Resolved Metrics caching issues.
- Resolved Vue property type issues.
- `FirstDayOfPreviousQuarter` is now fixed.
- Added `Nova.config.locale` configuration option, which is then passed to `N numeral.js`.

v2.0.9 (Orion)

Released Jul 03, 2019

- Fixes issue where the existing resource ID was not being passed to Panels, breaking some third-party Nova packages and fields.

v2.0.8 (Orion)

Released Jul 02, 2019

- Nova will now display **Panel**s on the Create and Update views in addition to the Detail view.
- Adds ability to customize the pagination options per resource.
- Adds ability to add additional types to the **Badge** field.
- Action resources will now show any exceptions recorded when running the action
- Nova will now use the app's locale inside the HTML **lang** attribute
- Fixes issue where fields marked as **readonly** were still validated, causing issues where a user couldn't partially update a resource.
- Fixes issue where Metrics wouldn't reload when the resource changes in the URL.

v2.0.7 (Orion)

Released Jun 25, 2019

- Fix migration definition of action **original** and **changes** columns to be **text** types instead of **json**. This allows Nova to continue to support older versions of MySQL.

v2.0.6 (Orion)

Released Jun 10, 2019

*This version of Nova includes a migration. Make sure to run **php artisan migrate** to receive the latest database changes.*

- **Beta:** Added **Badge** field type which enables displaying a custom status badge in the resource index and detail views.
- Add resource changes to **ActionResource** when creating and updating resources.
- The **BelongsTo** field will now pass the resource ID when fetching available resources
- Add ability to translate the Download button on **Field** fields.
- Decrease minimum waiting time to 300ms in resource index views.
- Fix issue with lenses when fetching data never stopped loading
- Fix attaching BelongsToMany when using non-standard pivot keys.

v2.0.5 (Orion)

Released May 15, 2019

- Fixes issue where new translations were not added to Nova's published assets.

v2.0.4 (Orion)

Released May 14, 2019

- Fix issue where Lens pagination would be stuck after fetching a new page.
- Fix regression where Per Page filter selector didn't update the amount of resources in the index listing.
- Fix select controls inside **Metric** Vue components.
- Fix issue where Gravatar and Avatar images get squished on dense resource table views.
- Adds cancel button to Attach, Create, Update, and UpdateAttached views.
- Adds a few missing translation keys for **Resource** deleted and restored confirmations.
- Nova will now prevent a user from using create and edit shortcuts when a policy or gate forbids the action.
- Nova will now show non-viewable relations as normal text instead of bold.

- Changes minimum password length inside the **UserResource** stub to the recommended 8 character minimum.
- Changes location of Nova's logout route registration.
- Changes global search to show hotkey help text.
- Nova will now show loading indicators for the resource table when fetching new records.
- Adds ability to specify where a user is redirected after saving and updating a resource.
- Improves how multi-word Resource names are labeled by default.
- Updates translation keys to support more translation scenarios where gender and word order are important.
- Adds **KeyValue** translation keys.
- Adds the ability to customize the headings for the **KeyValue** field.

v2.0.3 (Orion)

Released May 01, 2019

- Reverts PR that introduced an infinite request loading issue on Detail views.

v2.0.2 (Orion)

Released Apr 29, 2019

- **Beta:** Added new **KeyValue** field type to enable editing of flat JSON data columns.
- Partition Metric colors may now be specified as a flat list for instances where the Metric labels are unknown at runtime.
- Pagination links will now be disabled when fetching new resources to avoid errant clicks.
- Nova will now disable autofill on **Password** fields.
- You can now specify readonly fields without passing a boolean to the method.
- Nova will now avoid refreshing the action log when its tab is not focused.
- The underlying resource's model will now be passed to computed field's callback.

- Custom owner key's are now supported in the BelongsTo field.
- Dusk selectors are now added to **Select** fields to better facilitate user Dusk tests.
- Nova will now not allow a user to clear the search input of relation fields if the relation is not nullable.
- Fixed issue with serializing resources using a **Request** instance instead of **NovaRequest** .
- Fixed issue with **Password** fields where certain request attributes would be resolved incorrectly.
- Fixed issue with Postgres and searching larger numbers.
- Fixed regression with pagination.
- Fixed issue where pagination events were sent when they didn't need to be.

v2.0.1 (Orion)

Released Mar 27, 2019

- Security: prevent escaping the CSV parsing logic when validating unique values on resource update.
- Added ability for Actions to open URLs in a new tab.
- Nova will now pass along the resource ID when fetching cards on detail views.
- Nova will now pass along the relationship type when fetching resource actions.
- Reduced queries for eager loaded relations.
- Added ability for all fields to be read-only on create and update forms.
- Nova now uses its own Exception handler class instead of the hosting app's one.
- Nova will now avoid resolving Computed fields in create and update views.
- Fixed issue with pagination not using the **perPage** property from the response.
- Fixed issue with resources named "Resource".
- Fixed visual issue with the File field on index listing.
- Fixed issue with showing help text and errors.

v2.0.0 (Orion)

Released Feb 26, 2019

- Provides compatibility with Laravel 5.8.

Nova 2.0 is primarily a maintenance release to provide compatibility with Laravel 5.8. Nova 2.0 should **only** be used with Laravel 5.8, as it is not compatible with previous releases of Laravel. Your Nova resources will not require any changes during this upgrade; however, you should review the entire.

v1.3.2 (Orion)

Released Feb 11, 2019

- Nova's layout will now be hidden while Vue is mounting.
- Added ability for Lenses to have their own separate Actions.
- Added ability for Lenses to have their own Cards.
- Added "Select All Matching" ability on Lenses.
- Added ability to disable writing to the Action Log when running.
- Improved formatting for Metric values
- Fixed an issue with counting resources on SQL Server.
- Fixed an issue with using a custom connection when counting resources.
- Fixed an issue in File fields where long file names wouldn't be truncated in the UI.
- Fixed regression in disabling morphTo field on relationship creation.
- Fixed miscellaneous visual issues.

v1.3.1 (Orion)

Released Jan 21, 2019

- Added Heading field type:
- Trend and Value metrics now support customization of their formatting.
- Nova now shows an error message when your CSRF token has expired.
- You can now customize the filling strategy for Password fields.

- MorphToFields resource search fields are now disabled when a type hasn't been selected.
- Resource counts in Lenses are now correct when the query uses GROUP BY clauses.
- Fixed issue where no results would be returned when using Laravel Scout.
- Fixed issue where custom primary keys were not being returned on resource creation and updates.
- Fixed issue where certain values were not translatable inside of error views.
- Filter requests are now reduced to a minimum.
- Several General fixes, formatting changes, and improvements.

v1.3.0 (Orion)

Released Jan 07, 2019

- Adds support for setting the placeholder attribute on Date, DateTime, and Trix fields.
- Adds support for setting the placeholder attribute on the Date filter.
- Adds support for customizing the Value and Trend value formatting.
- Adds support for registering your own Vuex stores inside custom Nova components.
- Adds method singularLabel to better support localization of ActionResource.
- Adds Kosovo to Country field and translations.
- Adds ability to set maxWidth of Avatar, Gravatar, and Image fields.
- Fixes an issue when triggering actions on User resources that don't have name attributes.
- Fixes issue where the MorphTo field wasn't using the morph map.
- Fixes regression in Filters where Filters were using the same component state.
- Fixes issue when closing the confirm action modal.
- Fixes issue affecting the display of resource fields in Lenses.
- Fixes 404s with assets where the file doesn't exist.
- Fixes issue where the morph map wouldn't be honored on ActionEvents.
- Fixes untranslatable label on File field when no file is selected.
- Removes extra delete requests if "Select all Matching" is selected.

v1.2.1 (Orion)

Released Dec 12, 2018

- Add ability to pass custom rules as the first argument.
- Add support for resolving from JSON field in boolean and gravatar fields.
- Add support for Twig inside of code fields.
- Add helper method to resolve BIGINT ID fields as strings for the front-end.
- Add ability to set the first day of the week on Date and DateTime fields and Actions.
- Add support for custom filter keys, which enables you to reuse an action in the same resource, but configure it differently.
- Nova will now format with whitespace for **Textarea** fields.
- Nova will now delete the previous file from storage if the field is updated and **prunable**.
- Nova will now send invalid resource names in the URI to 404 view.
- Allow footer to be published alongside other views.
- Improve handling of custom **Authenticable** models in the user navigation.
- Nova will now pass the value and disk name to File field callbacks
- Fix issue with File fields colliding when the attribute name was "files".
- Fix browser compatibility issue with dropdowns using **flatMap**.
- Fix issue with action events and authenticable identifiers.
- Fix issue generating the uri key of lens and partition, trend, and value metrics.
- Fix z-index of search results when visible over a card.
- Fix issue that kept code and markdown fields from showing their full content on load.
- Fix visual regression in empty index buttons.
- Fix issue where date fields would close the action modal but leave the calendar visible.
- Fix mapping of integer keys in Boolean filter.
- Fix issue that kept action resource counts from being updated correctly.
- Fix issue where resource count labels couldn't be translated into their proper plural in non-english languages.
- Fix issue with showing image previews on detail and form screens.
- Fix issue where empty resource groups were shown in the sidebar.
- Fix morph map inside action log.
- Fix scrollbar overflow on actions menu.

- Fix collision of action fields when field is using the name `action` .

v1.2.0 (Orion)

Released Nov 28, 2018

- Fix resource ID on custom detail toolbars
- Fix missing error border color for date fields
- Allow translation of password reset email subject
- Improve handling of empty filter value
- Allow translation of action log header
- Add loading state to form buttons
- Enable middle click on create/attach buttons
- Allow to set custom label colors of a partition metric
- Extract dropdown inline style to class to help RTL conversion
- Add support for latitude and longitude in the place field
- Allow actions to only be shown on the index view

v1.1.9 (Orion)

Released Nov 27, 2018

- Fix empty select filter value regression
- Fix issue with filter stub component property visibility
- Fix NaN in partition metric if all values are zero
- Fix regression in buttons labels
- Fix hardcoded icon colors
- Add ability to localize 'Run Action', 'Edit', 'Delete', 'Force Delete', and 'Restore' on detail views
- Add ability to localize Value metric labels
- Use Nova's configured site name for the page title

v1.1.8 (Orion)

Released Nov 21, 2018

- Support for the
- Support for the
- Support for
- Allow null values on select fields
- Reload actions menu after executing an action
- Adds default placeholder text for textarea field
- Fix issue where lens wouldn't reload if the lens changed in the URL
- Fix `document.createElement` error from Trix field
- Fix for disappearing filters menu when paginating out of range and there are no resources
- Fix select all/select all matching checkboxes on Safari and Firefox
- Fix general checkbox issues in Safari and Firefox
- Fix `for` attributes on text fields
- Fix action downloads responses in Firefox

v1.1.7 (Orion)

Released Oct 25, 2018

- Support for nullable BelongsTo and MorphTo relationships.
- Respect custom singular label on BelongsTo relationships.

v1.1.6 (Orion)

Released Oct 24, 2018

- Fix regression with file deleting / pruning behavior.

v1.1.5 (Orion)

Released Oct 23, 2018

- Fix creating Trix attachments model creation.

v1.1.4 (Orion)

Released Oct 01, 2018

- Custom relationship labels are now respected.
- Nova authentication guard is now configurable.
- Allow Textarea, Markdown, and Trix fields to always show content if desired.
- Fix bug that prevented files from being deleted if they were only displayed on forms.
- Added Password Confirmation field
- Added currency method to ValueResult
- Allow for plugins to be added to Nova's Vue-toasted config
- Allow textareas fields to specify row height
- Allow setting any attribute on text and textarea fields
- Removed autocompletion for create/update forms
- Fix display of null date fields on index
- Fix issue with modal widths and long action fields
- Fix issue with modal and long forms
- Fix issue where help text wasn't being shown for Trix fields
- Improvements to global shortcuts
- Fix issue where long help text would break form
- Add ability to use HTML in help text

v1.1.3 (Orion)

Released Sep 21, 2018

- Fix regression.
- Fix action event log when using `morphMap` method.

v1.1.2 (Orion)

Released Sep 21, 2018

- Fix bug with `HasOne` validating that prevented resources with a `BelongsTo` relationship that references a `HasOne` from being updated.

v1.1.1 (Orion)

Released Sep 20, 2018

- Fix `Date` field not respecting `format` on index and detail screens.
- Fix inability to attach resources when related resources were not authorized for creation.
- Fix bug that prevented the deletion of resources that had non-nullable `Trix` fields that accepted file uploads.

v1.1.0 (Orion)

Released Sep 20, 2018

- Add place-holder Vue components for index and detail headers and toolbars that may be customized for your own Nova installation.
- Fix Postgres case sensitivity during search.
- Allow passing options to `Code` field `json` method.

- If a `canRun` callback is defined on an action, it now takes precedence over the `update` policy method.
- Fix `Currency` field `null` check when \$0.00.
- Fix bug that caused Markdown excerpts to not show on detail page.
- Added SQL syntax highlighting support to `Code` field.
- Fix sidebar display issues.
- Fix typing “/” in Trix field triggering global search.

v1.0.19 (Orion)

Released Sep 19, 2018

- Fix bug with JSON attributes.
- Add `nova:asset` command.

v1.0.18 (Orion)

Released Sep 19, 2018

- Fixes custom date columns not being utilized by Trend metric.
- Add support for custom date columns in Value metric.
- Filters may now accept constructor arguments.
- Custom application namespace now respected on `nova:install`.
- Resource action event labels are now translatable.
- Search on Postgres will be fixed on upcoming Laravel 5.7 release.
- Resources may be grouped using `group()` method or `$group` property.
- Fix bug that caused validation errors to still show on update screen after update and continue editing.
- Fix bug that caused image loader to not show images on remote disks.
- Fix auto-completion bug with states and `Place` field.
- Fix pivot fields not displaying on index and detail screens.
- Fix resolve callbacks from JSON fields.

- Fix displaying zero (0) in **Number** field.

v1.0.17 (Orion)

Released Sep 18, 2018

- Update location of Nova resources to **public/vendor/nova** to bring location into consistency with other Laravel tools.
- Fixed issue that caused buttons to be shown on custom panels that had "Details" in the title.
- Fixed issue with sortable and callable attribute names.
- Fixed "stuck on 95%" Nova asset compilation issue on Windows.
- Changed Tool.vue stub to show the correct output folder.
- Fixed issue with Gravatar field when email addresses have uppercase letters.
- Removed **/dist** from **.gitignore** file in card, tool, resource tool, custom field, and theme stubs.
- Hide "Show Content" link when there is no content for textarea, Trix, and Markdown fields.
- Various other bug fixes and feature improvements.

This update changes the location of Nova's assets to **public/vendor/nova**. After updating, run the **nova:publish** command as noted in Nova's upgrade documentation.

v1.0.16 (Orion)

Released Sep 12, 2018

- Improvements to search.
- Improvements to search localization.

v1.0.15 (Orion)

Released Sep 11, 2018

- Allow numeric searches to search on fields other than the primary key.
- The `belongsTo` and `morphTo` fields now respect custom labels.

v1.0.14 (Orion)

Released Sep 09, 2018

- Various bug fixes.

v1.0.13 (Orion)

Released Sep 07, 2018

- Various bug fixes.
- Add `Macroable` to `Field`.
- Fix help text on `Code` field.

v1.0.12 (Orion)

Released Sep 04, 2018

- Bug fixes and performance improvements.

v1.0.11 (Orion)

Released Sep 04, 2018

- Fix Trix bug.

v1.0.10 (Orion)

Released Sep 04, 2018

- Fix front-end date handling bug.

v1.0.9 (Orion)

Released Sep 04, 2018

- Added support for upload when using the Trix field.
- Added `nova:theme` command.
- Support for running Nova at the root of the application.
- Support for returning HTML from computed Text fields.

v1.0.8 (Orion)

Released Aug 29, 2018

- Various bug fixes.

v1.0.7 (Orion)

Released Aug 28, 2018

- Fix some Nova commands on Windows.

v1.0.6 (Orion)

Released Aug 24, 2018

- Fixed an issue with DateFields not showing.
- Fixed an issue with non-secure assets on authentication pages.
- Fixed an issue with global search items not being clickable.
- Fixed an issue where validation wouldn't be reset when "adding another" resource.
- Fixed an issue on Windows with scrollbars always being shown on Partition metrics.
- Fixed an issue in Firefox where loader animations were too big.
- Added links to documentation on the default Help card.
- Highlight side navigation links when active.
- Made global search respect custom labels for resources.
- Made more buttons honor the custom labels for resources.
- Fixed Lens table views to allow scrolling

v1.0.5 (Orion)

Released Aug 23, 2018

- Localize singular resource name in several instances.
- Add `view:clear` command to `nova:publish` command.

v1.0.4 (Orion)

Released Aug 23, 2018

- Fix `date` field.
- Fix translation problems when installed with Spark.

v1.0.3 (Orion)

Released Aug 22, 2018

- Fix trend amounts for large numbers.
- Fix modals on Safari.

v1.0.2 (Orion)

Released Aug 22, 2018

- Fix issue with fields that have name matching a global PHP function.

v1.0.1 (Orion)

Released Aug 22, 2018

- Add "register" method to PendingRouteRegistration.
- Address route caching issue.

v1.0.0 (Orion)

Released Aug 22, 2018

Official release of Laravel Nova.

Nova is a beautifully designed administration panel for Laravel. Carefully crafted by the creators of Laravel to make you the most productive developer in the galaxy.

v0.1.1 (Orion)

Released Aug 21, 2018

- Various bug fixes.

v0.1.0 (Orion)

Released Aug 21, 2018

Official Nova Pre-Release.
