**Summary** SSH\_FXP\_OPENDIR may Lead to Exhaustion of File Handles

## Details

### Summary

Allocation of Resources Without Limits or Throttling vulnerability in Erlang OTP `ssh` (`sshsftp` modules) allows Excessive Allocation, Flooding. This vulnerability is associated with program files `lib/ssh/src/sshsftpd.erl`.

This issue affects OTP from OTP 17.0 until OTP 28.0.3, OTP 27.3.4.3 and 26.2.5.15 corresponding to `ssh` from 3.0.1 until 5.3.3, 5.2.11.3 and 5.1.4.12.

### Workaround

- disabling SFTP
  - limiting number of `max_sessions` allowed for `sshd`, so exploiting becomes more complicated

### Configuration

The SFTP subsystem must be enabled on the SSH server and the SSH port must be reachable by the attacker. SFTP is enabled by default unless explicitly

disabled by setting {subsystems, []} in the SSH daemon configuration.
