As immediate action, update the affected plugin. If you're unable to do so, ask your hosting provider or web developer for help.

6.6 Cross Site Scripting (XSS)

This could allow a malicious actor to inject malicious scripts, such as redirects, advertisements, and other HTML payloads into your website which will be executed when guests visit your site.

CVSS score is a way to evaluate and rank reported vulnerabilities in a standardized and repeatable way but which is not ideal for WordPress.

Solutions

This security issue has a low severity impact and is unlikely to be exploited.

Update to version 6.9 or later.

Update to version 6.9 or later to resolve the vulnerability. Patchstack users can turn on auto-update for vulnerable plugins only.
