## Risks CVSS 7.6

Vulnerabilities like this one are used in mass-exploit campaigns. Attackers use these to attack thousands of websites at a time, regardless of traffic size or popularity.

As immediate action, update the affected plugin. If you're unable to do so, ask your hosting provider or web developer for help.

### 7.6 SQL Injection

This could allow a malicious actor to directly interact with your database, including but not limited to stealing information.

CVSS score is a way to evaluate and rank reported vulnerabilities in a standardized and repeatable way but which is not ideal for WordPress.

## Solutions

This security issue is **Critical** and **Exploited**.

### We value your privacy

We use cookies to enhance your browsing experience, serve personalised ads or content, and analyse our traffic. By clicking "Accept All", you consent to our use of cookies.  
Read more.

### Update to version 1.1.3 or later.

Update to version 1.1.3 or later to resolve the vulnerability. Patchstack users can turn on auto-update for vulnerable plugins only.
