## Risks CVSS 8.2

Vulnerabilities like this one are used in mass-exploit campaigns. Attackers use these to attack thousands of websites at a time, regardless of traffic size or popularity.

As immediate action, update the affected plugin. If you're unable to do so, ask your hosting provider or web developer for help.

### 8.2 SQL Injection

This could allow a malicious actor to directly interact with your database, including but not limited to stealing information.

CVSS score is a way to evaluate and rank reported vulnerabilities in a standardized and repeatable way but which is not ideal for WordPress.

## Solutions

This security issue is **critical** and **exploitable**.

### Automatically mitigate vulnerabilities and keep your websites safe.

Patchstack has issued a mitigation rule to block any attacks until you have updated to a patched version.

Get the fastest vulnerability mitigation with Patchstack!

Get started

### Update to version 2.7.7 or later.
