WordPress Sucuri Security Plugin <= 1.8.33 is vulnerable to Cross Site Request Forgery (CSRF)

Low priority

No impactful threat

<= 1.8.33

Vulnerable version(s)

1.8.34

Patched version

 WordPress plugin

 No VDP

14 Sep, 2022

Get the fastest vulnerability mitigation with Patchstack!

Get started

Risks CVSS 2.3

Vulnerabilities like this one are used in mass-exploit campaigns. Attackers use these to attack thousands of websites at a time, regardless of traffic size or popularity.

[Pricing](#)[Case studies](#)[Login](#)[Start trial](#)

As immediate action, update the affected plugin. If you're unable to do so, ask your hosting provider or web developer for help.

User Interaction Required

While this vulnerability can be initiated by the role shown in "Required Privilege", successful exploitation requires a privileged user to perform an action — such as clicking a malicious link, visiting a crafted page, or submitting a form.

2.3 Cross Site Request Forgery (CSRF)

This could allow a malicious actor to force higher privileged users to execute unwanted actions under their current authentication.

CVSS score is a way to evaluate and rank reported vulnerabilities in a standardized and repeatable way but which is not ideal for WordPress.

Solutions

This security issue has a low severity impact and is unlikely to be exploited.

Update to version 1.8.34 or later.

Update to version 1.8.34 or later to resolve the vulnerability. Patchstack users can turn on auto-update for vulnerable plugins only.
