CVE-2015-8325

Publication date 30 April 2016

Last updated 25 August 2025

Ubuntu priority

Low

[Why this priority?](#)

Cvss 3 Severity Score

7.8 · High

[Score breakdown](#)

Description

The `do_setup_env` function in `session.c` in `sshd` in OpenSSH through 7.2p2, when the `UseLogin` feature is enabled and PAM is configured to read `.pam_environment` files in user home directories, allows local users to gain privileges by triggering a crafted environment for the `/bin/login` program, as demonstrated by an `LD_PRELOAD` environment variable.
