1822	1882	msgid "When loading the map of all users with no pagination, the map script will iterate multiple times and will expose gradually POIs on the map, until all the POIs for the users that match the criteria will be added on the map (think of this as of pagination for the map POIs). The smaller the number of users per iteration, the fastest the iteration response will be, but for a large number of users, the map script will iterate multiple times. Setting a higher limit will decrease the performance, but might produce a smaller number of iterations. Please adjust this value to your hosting capabilities, and make sure that the value you set is the best for performance. We recommend a maximum value of 300."
