Operations Agent (OA)

Article Body

Summary

A high severity privilege escalation vulnerability has been discovered in OpenText™ Operations Agent 12.29 and earlier on Windows OS.

Systems affected: Operations Agent 12.29 and earlier on Windows OS.

Details:

A security audit identified a privilege escalation vulnerability in Operations Agent on Windows. Under specific conditions Operations Agent may run executables from specific writeable locations.

CVE: reference: CVE-2026-2123

Impact: A low-privileged user could potentially cause code execution with SYSTEM-level privileges on the local system. The issue requires local system access for the attacker.

RESOLUTION

A hotfix has been created which will enforce explicit, fully qualified paths when launching executables.

- The hotfix can be downloaded from the [Marketplace \(https://marketplace.opentext.com/itom/content/operations-agent-hotfix-for-cve-2026-2123-privilege-escalation/\)](https://marketplace.opentext.com/itom/content/operations-agent-hotfix-for-cve-2026-2123-privilege-escalation/) for the OA versions mentioned below.
