

QD

A web framework for HTTP timed task automation.

[Get Started](#)

[View on GitHub](#)

Har-based

By simply uploading Har obtained through packet capture, you can create HTTP task template required by the framework.

Tornado Server

Use Tornado as a server to asynchronously respond to front-end and initiate HTTP requests.

API & Plugin Support

Various APIs and filters are built in for template creation, and custom plugins will be provided later.

Open source
