

Security updates 1.7-rc5, 1.6.14 and 1.5.14 released

Published: 18 March 2026

Tags: [releases](#) [updates](#) [security](#)

We just published security updates to the 1.6 and 1.5 LTS versions of Roundcube Webmail, as well as a release candidate for coming 1.7. They contain fixes for recently reported set of security vulnerabilities.

Security fixes

- Fix pre-auth arbitrary file write via unsafe deserialization in redis/memcache session handler, reported by y0us.
- Fix bug where a password could get changed without providing the old password, reported by flydragon777.
- Fix IMAP Injection + CSRF bypass in mail search, reported by Martila Security Research Team.
- Fix remote image blocking bypass via various SVG animate attributes, reported by nullcathedral.
- Fix remote image blocking bypass via a crafted body background attribute, reported by nullcathedral.
- Fix fixed position mitigation bypass via use of !important, reported by nullcathedral.
- Fix XSS issue in a HTML attachment preview, reported by aikido_security.
- Fix SSRF + Information Disclosure via stylesheet links to a local network hosts, reported by Georgios Tsimpidas (aka Frey), Security Researcher at <https://i0.rs/>.

See the full changelogs in the release notes on the Github download pages for the updated versions
