Debian Security Advisory DSA-4454-1
<https://www.debian.org/security/>
May 30, 2019

security () debian org
Moritz Muehlenhoff
<https://www.debian.org/security/faq>

Package : qemu
CVE ID : CVE-2018-11806 CVE-2018-12617 CVE-2018-16872 CVE-2018-17958
CVE-2018-18849 CVE-2018-18954 CVE-2018-19364 CVE-2018-19489
CVE-2019-3812 CVE-2019-6778 CVE-2019-9824 CVE-2019-12155

Multiple security issues were discovered in QEMU, a fast processor emulator, which could result in denial of service, the execution of arbitrary code or information disclosure.

In addition this update backports support to passthrough the new md-clear CPU flag added in the intel-microcode update shipped in DSA 4447 to x86-based guests.

For the stable distribution (stretch), these problems have been fixed in version 1:2.8+dfsg-6+deb9u6.

We recommend that you upgrade your qemu packages.

For the detailed security status of qemu please refer to its security tracker page at:
<https://security-tracker.debian.org/tracker/qemu>

Further information about Debian Security Advisories, how to apply these updates to your system and frequently asked questions can be found at: <https://www.debian.org/security/>
