Intel® Product Security Center Advisories

Intel is focused on ensuring the security of our customers computing environments. We are committed to rapidly addressing issues as they arise, and providing recommendations through security advisories and security notices.

Security advisories are fixes or workarounds for vulnerabilities identified with Intel products.

Intel® Product Security Bulletins

Intel is focused on ensuring the security of our customers computing environments. We are committed to rapidly addressing issues as they arise, and providing recommendations through security advisories and security [bulletins](#).

Report a Vulnerability

If you have information about a security issue or vulnerability affecting an **Intel branded product or technology**, submit your report via [the Intigriti platform](#), where you'll find eligibility criteria and submission instructions. All vulnerability reports must be submitted through Intigriti.

For issues not related to reporting security vulnerabilities, contact [Intel PSIRT](#).

For issues related to Intel's external web presence (Intel.com and related subdomains), please contact [Intel's External Security Research](#) team.

Intel® Bug Bounty Program

Intel Corporation believes that working with skilled security researchers across the globe is a crucial part of identifying and mitigating security vulnerabilities in Intel products. Like other major technology companies, Intel incentivizes security researchers to report security vulnerabilities in Intel products to us to enable a coordinated response.

To encourage closer collaboration with the security research community on these kinds of issues, Intel created its Bug Bounty Program. The program provides a structured process for security researchers to collaborate with Intel on identifying and mitigating potential security vulnerabilities, coordinating responsible disclosure, and receiving recognition for contributions.

Working with Intigriti as our provider helps ensure independent oversight, consistent report management, and compliance with regulatory commitments.

[Intel® Bug Bounty Program Terms](#)

Intel® CSAF Advisories

The Common Security Advisory Framework (CSAF) is a standardized language designed for the automated exchange of security advisories' allows vulnerabilities to be disclosed in a machine-readable format. Public Intel® CSAF advisories can be found [here](#).

Intel Security Vulnerability Researcher Community Code of Conduct

The [Code of Conduct](#) applies to all interactions among persons reporting or discussing security issues with Intel employees ('Community Members'). It outlines the expected/acceptable standards of behavior, classifies some unacceptable behaviors, and describes possible enforcement actions for the Community Member interactions if unacceptable behavior arises during crowdsourced security vulnerability research such as the Intel® Bug Bounty Program, Project Circuit Breaker, vulnerability reporting, or any other communications interactions such as slack channels, email communication, or in person communications.
