OVERVIEW

A reflected cross site scripting vulnerability in authentication endpoint.

DESCRIPTION

Due to insufficient input parameter validation a reflected Cross-Site Scripting (XSS) attack can be executed by injecting a malicious payload into the authentication endpoint.

IMPACT

By leveraging the XSS attack a malicious actor can make the browser get redirected to a malicious website make changes in the UI of the web page retrieve information from the browser or harm otherwise. However since all the session related sensitive cookies are set with httpOnly flag and protected session hijacking or similar attacks would not be possible.
