Pydio Cells is the mature open source alternative to dropbox and box, for the enterprise.

Why building your own box?

You need to access your documents across multiple devices, and regularly share documents (weblinks) and folders with your contacts and teams. Still, using a consumer SaaS box or drive service is neither practical nor safe. And enterprise SaaS box or drive services are expensive and come with Disk Storage that you already have on your servers or private cloud.

How to build your own box with Pydio?

Easily install Pydio on your servers or cloud of choice,
Simply share documents and folders with your teams,
Administrate your box with an Enterprise grade console (rights, groups, plug ins),
Access documents with a Web Gui, Smartphones and tablet apps (iOS, Android),
Sync folders on your computer (PC, Mac, Linux).

Features

- File sharing to internal and external users
- Standard file system actions, plus metadata
- Drag'n'drop, right-click for contextual menus, modal windows
- Connect to your S3 object storage (AWS, AZURE and GoogleCloud)
- Users / Roles Management
- Built-in WebDAV access to the repositories
- iOS and Android applications available
- Synchronization client available for mac & windows.
- Micro service architecture

Project Samples

MongoDB

Gen AI apps are built with MongoDB Atlas

Atlas offers built-in vector search and global availability across 125+ regions. Start building AI apps faster with Business Categories

Featured

MongoDB Atlas gives you the freedom to build and run modern applications, anywhere—across AWS, Azure, and Google Cloud. With global availability in over 115 regions, Atlas lets you deploy close to your users, meet compliance needs, and scale with confidence across any geography.

I've compared all the pro and contra. Pydio Cells is still Better alternative than side Dropbox-like services

PRO: • Focuses on file management (and does not want to be a mediocre monolith for every thing; there are other platforms dedicated to calendar/task/mail management → Unix principle) • Permits external changes to files on the server while the Pydio instance is running → possibility to access them with other protocols like SSH, Samba, Git... • Many ways of customization • Appearance • Read More

Pydio was the perfect solution for editing my website without needing to load coding IDEs on the local machine. This is the perfect tool to allow quick bug fixes from any remote location (ie: hotel, home, work, school, smartphone, etc.) This allows me to even update my website files when ftp is blocked by certain networks! It works good and can be installed alongside of ISPConfig. [Read More »](#)

Great tool. Lacks a desktop app like OwnCloud offers. But comes with iOS and Android apps.
