An automated, Web based IP address management (IPAM) software. It features powerful search and filter functions for both networks and host, as well as many tools (e.g. a subnet calculator) helping Administrators to plan and handle complex IP networks

## Features

- Easy script based installation
- Network and VLAN discovery
- Supports full IP life cycle
- Integration with Microsoft DNS by secure dynamic DNS updates
- Support for multiple clients with overlapping networks
- Tools to split/join/scaling up/scaling down networks
- Web form to migrate from spreadsheet based IP management
- Automatic update of the networks against DNS/OCS InventoryNG/via SNMP
- Shows free network ranges
- Integrated subnet calculator
- Integrated VLAN management
- Customizable columns for network and host list views
- Auditable
- Well documented
- Integrated lease and dial-up line management
- DNS zone file generator for forward and reverse zones (BIND and tinydns)
- Full IPv4/IPv6 support
- Commercial support available

## Featured

Built on open standards like Prometheus and OpenTelemetry, Grafana Cloud includes Kubernetes Monitoring, Application Observability, Incident Response, plus the AI-powered Grafana Assistant. Get started with our generous free tier today.

Has a lot of features, but the GET API (which you only get with premium) is pretty barebones and outdated. It recently got a cool new interface. The installation process is a bash script with 3670 lines which you have to run as root. That's unacceptable in today's IT world. Fits with the code hosting on SF though. The code itself is a mishmash of obfuscated Perl and Spanish comments. The
