### Pega Security Advisory - A26 Vulnerability - Remediation Note

[Download](#)

Pega continually works to implement security controls that are designed to protect client environments. With this focus, the Pega Robotics team has identified two security vulnerabilities, one rated **High (7.2)**, and the other rated **Medium (6.0)** on the CVSS scale.

Note: These vulnerabilities are unrelated to the vulnerability reported on December 30, 2025.

#### High Severity Vulnerability (CVSS 7.2)

##### Affected Product

- Pega Robotic Automation **version 22.1 or R25**
- Users running automations in **Google Chrome** or **Microsoft Edge**

##### Risk Description

A bad actor could create a malicious website containing code that targets the Pega Browser Extension (PBE). The vulnerability may be triggered if a **Robot Runtime user navigates** to such a website.

#### Medium Severity Vulnerability (CVSS 6.0)

##### Affected Product

- **All versions** of Pega Browser Extension (PBE)

##### Risk Description

A malicious website could target PBE, triggering unexpected behavior—such as displaying an unexpected message box—if a user navigates to that site.

#### Required Client Action

##### Update Recommendations

To ensure you remain protected, Pega strongly recommends:

- Install **PBE 3.1.45** or later
- Update **Robot Studio** and **Robot Runtime** to **25.1.13**

PBE 3.1.45 or later is compatible with **any version** of Robot Studio or Robot Runtime in **R25 or 22.1**.

**Note:** If developing automations with **R25**, update both Robot Studio and Robot Runtime to **25.1.13**.

#### Download Instructions

To download the latest PBE build:

- Go to **My Software** and download **25.1.13**
- If using version **22.1**, only the PBE update is required, you do **not** need to upgrade to R25
- See [Downloading Pega Robotic Automation software](#) for more details

| Issue details     | High vulnerability: Pega Robotic Automation version 22.1 or R25                | Medium vulnerability: Pega Browser Extension                   |
|-------------------|--------------------------------------------------------------------------------|----------------------------------------------------------------|
| Software product  | Pega Robot Runtime and Pega Browser Extension (PBE)                            | Pega Browser Extension (PBE)                                   |
| Affected versions | Pega Robotic Automation versions 22.1 and R25                                  | All versions of Pega Robotic Automation                        |
| CVE               | CVE-2026-1078                                                                  | CVE-2026-1079                                                  |
| CVSS rating       | High – 7.2                                                                     | Medium – 6.0                                                   |
| Description       | Pega RPA – Pega Browser Extension (PBE) security vulnerability (Robot Runtime) | Pega Browser Extension (PBE) security vulnerability (Base PBE) |

Information about these issues, and their remediation, was publicly posted on Pega Support Center on April 6, 2026. Prior to this date we requested clients **not discuss this in public forums** to help ensure that all customers had adequate time to apply the necessary remediations.

### Additional Product Enhancements

Robotic Automation **25.1.12** introduced exciting features, including **Robotics Autopilot**. Users updating to **25.1.13** will also receive these enhancements.

For details, see [New and updated features](#).
