

# Stored XSS vulnerability in the Item history/Plain text widget (CVE-2026-23928)

## Details

Type:	Defect (Security)	Resolution:	Fixed
Priority:	Major	Fix Version/s:	None
Affects Version/s:	None		
Component/s:	<a href="#">Frontend (F)</a>		
Labels:	None		

## Description

CVE ID	CVE-2026-23928
CVSS score	7.3 (High)
CVSS vector	CVSS:4.0/AV:N/AC:L/AT:P/PR:H/UI:P/VC:H/VI:H/VA:H/SC:N/SI:N/SA:N
Affected components	Frontend
Summary	Stored XSS vulnerability in the Item history/Plain text widget
Description	The Item history widget (in Zabbix 7.0+) or the Plain text widget (in Zabbix 6.0) can execute injected JavaScript when HTML display is enabled. This can allow an attacker to perform unauthorized actions depending on which user opens a dashboard containing these widgets. The malicious JavaScript would have to come from a monitored host controlled by the attacker. Note: the Item history widget is a replacement for the Plain text widget since Zabbix 7.0.
Known attack vectors	An attacker controlled monitored host can send in malicious JavaScript payload that is then executed by the Item history/Plain text widget.
Affected and fix version/s	Affected: <b>6.0.0 - 6.0.44</b> → Fixed: <b>6.0.45</b> Affected: <b>7.0.0 - 7.0.23</b> → Fixed: <b>7.0.24</b> Affected: <b>7.4.0 - 7.4.7</b> → Fixed: <b>7.4.8</b>
Mitigation	Update the affected components to their respective fixed versions.
Workarounds	Do not use HTML display in Item history/Plain text widget or disable this widget entirely in Administration -> General -> Modules (Zabbix 7.0+).
