Submit #780399: code-projects Student Membership System 1.0 SQL Injection

Title code-projects Student Membership System 1.0 SQL Injection

Description The member deletion function directly concatenates \$_POST['id'] into the SQL delete statement. An attacker could modify the ID parameter to delete any member record, or even execute other malicious operations via SQL injection.

Impact: An attacker could delete all member data; by injecting a DROP TABLE command, they could delete the entire database table, resulting in permanent data loss.
