Submit #780474: itsourcecode Payroll Management System - V1.0 Argument Injection

Title itsourcecode Payroll Management System - V1.0 Argument Injection

Description - A SQL injection vulnerability was found in the "/manage_user.php" file of the "Payroll Management System Project In PHP". The reason for this issue is that attackers can inject malicious code from the parameter 'id' after no logging in with valid credentials. The application fails to properly sanitize or validate this input before using it in SQL queries. This allows attackers to manipulate SQL queries and perform unauthorized operations.
