Submit #782203: QingdaoU OnlineJudge <=v1.6.1 Stored SSRF

Title QingdaoU OnlineJudge <=v1.6.1 Stored SSRF

Description A stored Server-Side Request Forgery (SSRF) vulnerability exists in the Judge Server dispatcher of QingdaoU OnlineJudge. An attacker with access to a judge server token can submit a malicious `service_url` via the `/api/admin/judge_server_heartbeat` endpoint, which is then stored in the database. When the application subsequently processes judge tasks, it uses this unvalidated URL to construct and send internal HTTP requests. This allows the attacker to force the server to make arbitrary requests to internal network resources, potentially leading to metadata exfiltration, internal network scanning, or remote code execution.
