Submit #782932: PHPGurukul Online Shopping Portal Project 2.1 SQL Injection

Title	PHPGurukul Online Shopping Portal Project 2.1 SQL Injection
Description	A SQL injection vulnerability was identified within the "/paymentmethod.php" file of the "Online Shopping Portal Project" project. The root cause lies in the fact that attackers can inject malicious code via the parameter "paymethod". This input is then directly utilized in SQL queries without undergoing proper sanitization or validation processes. As a result, attackers are able to fabricate input values, manipulate SQL queries, and execute unauthorized operations.
