Submit #782969: AutohomeCorp frostmourne <= 1.0 SQL Injection

Title	AutohomeCorp frostmourne <= 1.0 SQL Injection
Description	Frostmourne Monitor contains a MySQL dynamic SQL injection vulnerability in the alarm preview/query flow. The metricContract.queryString value is treated as trusted SQL and is directly concatenated into backend queries without parameterization or whitelist validation. An authenticated attacker who can access the alarm preview functionality can first enumerate an available MySQL data name and then supply arbitrary SQL expressions that are executed by the server against the corresponding MySQL data source.
